Lansing, MI 48909

Subject: Southern Area Investigation Report– Former Hayes Lemmerz; Ferndale
Michigan
1600 West 8 Mile Road
Ferndale, Michigan
MID 041 803 123
Waste Data System Number 395519

Dear Mr. Rogers,

Please find enclosed this Southern Area Investigation Report – Former Hayes Lemmerz facility located at 1600 West Mile Road, Ferndale (Site) prepared by TRC Environmental Corporation (TRC) on behalf of Axle Holdings 1, LLC (Detroit Axle).

Pursuant to Title 40, Code of Federal Regulations, Part 270.11(b), I certify that I am authorized as a responsible corporate officer, president, director, secretary, superintendent, treasurer or vice president of the corporation in charge of the principal business function or any other person who performs similar policy or decision-making functions or operations for the corporation (Axle Holdings 1, LLC).

Axle Holdings 1, LLC

Mike Musheinesh

1.0 Background

The former Hayes Lemmerz Site, located at West Eight Mile Road, Ferndale, Oakland County, Michigan (Site) is a former hazardous waste facility regulated under Part 111, Hazardous Waste Management, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, and its administrative rules (Act 451). The Site is identified as Environmental Protection Agency (EPA) ID Number MID 041 803 123. Under Part 111, an owner or operator of such facilities is subject to corrective action to establish environmental protection standards based on zoning and intended land use.

Subsequent investigations of the Site Property were completed through 2021, as presented in the Atlas Technical Consultants LLC (Atlas), formerly known as ATC Group Services, LLC (ATC) Resource Conservation and Recovery Act (RCRA) Corrective Actions Description of Current Conditions and Interim Measures Report (CCR), dated April 5, 2021, and revised September 21, 2021.

Atlas also submitted a RCRA Corrective Action Facility Investigation (RFI) Work Plan (Work Plan) for the Site to EGLE for approval on February 17, 2022. The February 2022 Work Plan scope was later updated after EGLE provided a comment letter dated July 2022. The updated scope was submitted by TRC in a Revised RCRA Corrective Action Facility Investigation Work Plan dated September 2022 (updated work plan). The RFI summarized the proposed work scopes for the Areas of Concern (AOCs). The Site has been divided into 20 AOCs, based upon past use, identified solid waste management units (SWMUs), geophysical anomalies, electromagnetic induction (EMI) survey data and soil, groundwater and soil vapor concentrations within those specific AOCs.

The first work scope to be completed beginning in 4Q2022 into 2023 as part of the RFI Work Plan is the Southern Area scope which constitutes the majority of the former building and operational areas west of Pinecrest Dr. Areas and potential contaminants east of Pinecrest Dr. are being investigated as part of the Eastern Boundary work scope, with the recent findings of the Eastern Boundary investigation and next steps submitted in the Continued Eastern Boundary Investigation Report – Former Hayes Lemmerz dated April 3, 2023. As part of the Southern Area scope, AOCs 3, 7, 8, 9, 10, 11 and 12 were to be investigated. In addition, a Site Wide Investigation (site geology and utility pathway assessment) was proposed to be completed during the Southern Area investigation.

The AOCs within the Southern Area are as follows:

- AOC 3: The area designated as SWMU-3 (as originally defined in a Preliminary Assessment/Visual Site Inspection Report (PRC Environmental, 1994) is located within the eastern portion of the Site, within the northwest corner of the paved parking lot area. This location was a former burial area for various wastes utilized by Ethyl Corporation from approximately 1939 until 1955.
- AOC 7: This area contained historical Building H, which was utilized for fuel and oil blending. This former building was situated in between former Building B, which was utilized for experimental operations, a machine shop, and vehicle servicing and former Building C, which was utilized for engine research and dynamometer, fuel testing and control testing.

-
- AOC 8: This area contained historical Building D, of which the former operations occurring at this building are unknown. This former building was situated in between former Building DA, which was utilized for chemical research and former Building C, which was utilized for engine research and dynamometer, fuel testing and control testing.
 - AOC 9: The area of a former neutralization basin and former underground storage tank (UST) is located along the southeastern portion of the Southern Area.
 - AOC 10: EMI conducted indicated the presence of deep and shallow voids within the subsurface of this area, which is located within the southern-central portion of the Southern Area. Furthermore, a ground penetrating radar (GPR) survey conducted within this area indicated an anomaly within the subsurface. According to historical documentation, a former heating oil UST was located within this area.
 - AOC 11: Electromagnetic induction conducted indicated the presence of deep and shallow voids within the subsurface of this area, which is located within the southern-central portion of the Southern AOC Area. According to historical documentation, USTs were formerly located within this area.
 - AOC 12: EMI conducted indicated the presence of a large deep void within the subsurface of this area, which is located within the southern portion of the Southern AOC Area. Furthermore, a GPR survey conducted within this area indicated an anomaly within the subsurface.

The updated work plan was approved by the EGLE in a letter dated October 17, 2022. Upon approval, TRC then proceeded with the implementation of the updated work plan scope in December 2022 to May 2023. This report documents the investigation of the Southern Area and the Side Wide Investigation as proposed in the RFI.

2.0 Investigation Activity Summary

The following activities were completed December 2022 through May 2023 as proposed in the RFI at each of the AOCs within the Southern Area and the work proposed as part of the Sitewide investigation. First general practices followed during this investigation are discussed, and then the work by AOC is detailed after.

2.1 MISS DIG

MISS DIG, Michigan's one-stop underground utility clearance network, was notified of the pending subsurface investigation on December 1, 2022 (Ticket numbers: 2022101001293, 2022101001248, 2022101001228, 2022101001209, 2022101001108, 2022101001084, and 202210100105122120102621), at least 72 hours prior to commencing the subsurface investigation activities. MISS DIG's markings only extend to public properties and right-of-ways.

2.2 Private Utility Locating

Ground Penetrating Radar Systems LLC (GPRS) was retained by Job Site Services, Inc. (JSS) to locate and mark private underground utilities, including any buried utilities that might be present on Site. TRC and GPRS conducted a ground penetrating radar and electromagnetic survey on December 12 and 13, 2022, to identify and mark the location of any potential buried utilities relative to planned monitoring well installation, test pit excavation, and soil boring activities.

2.3 Monitoring Well and Soil Boring Installation

TRC supervised JSS in the installation of fifteen monitoring wells, MW-22-07 to MW-22-21, and two soil borings, SB-01 and SB-02, from December 12 to 16, 2022. The installation of the monitoring wells and soil borings was conducted via a track mounted Geoprobe 7822 unit utilizing direct push technology and over drilled using hollow stem augers. Soils were continuously logged by TRC geologist using the Unified Soil Classification System and to verify the depth to groundwater and the underlying low conductivity clay layer. The two soil borings were installed to 10-foot bgs, while the actual depth of monitoring well installation was determined based on the depth of the underlying clay layer, the bottom of the well screens were placed at the top of the clay/base of the sand layer at approximately 17.5 to 22 feet below ground surface. All soil boring logs are provided in **Appendix A**.

The monitoring wells were constructed using a 2-inch inside diameter poly vinyl chloride (PVC) casing with a 5-foot screen. The filter packs were comprised of medium washed silica sand and extends approximately two feet above the top of the screen. Following placement of the well screen sand, the well annulus was sealed with bentonite chips and the remaining annulus sealed with concrete approximately 0.5 feet ground surface (ft bgs). The wells were finished with riser mount protective metal cover, which was set approximately 1-foot into the concrete surface seal and approximately 4 feet above the ground surface. Well development was performed using pump and surge methods to remove debris from within the well casing and establish good communication with groundwater. Soil cuttings and development water were containerized in drums onsite for characterization and subsequent proper disposal. The well construction and development details are documented in the diagrams provided in **Appendix A**.

2.4 Deep Monitoring Well Installation

TRC supervised Stock Drilling, Inc. in the installation of one monitoring well into the underlying bedrock aquifer, MW-22-22D, from December 19 to 22, 2022 as part of the Site Wide Investigation. The installation of the monitoring well was conducted via a track mounted Terra Sonic 150 CC unit utilizing sonic drilling technology. A larger diameter outer casing was installed into the clay layer from the surface to 25 feet bgs. Soils were continuously logged by TRC geologist using the Unified Soil Classification System and to verify the depth to groundwater and the underlying shale bedrock. The actual depth of monitoring well installation was determined based on the depth of bedrock, the bottom of the well screen was placed within the shale bedrock at approximately 150 feet bgs. Soil boring logs are provided in **Appendix A**.

The monitoring well was constructed using a 2-inch inside diameter PVC casing with a 10-foot screen. The filter packs were comprised of medium washed silica sand and extends approximately two feet above the top of the screen. Following placement of the well screen sand, the well annulus was sealed with two feet of bentonite chips, followed by quick grout tremie filled to approximately 3 feet bgs, and the remaining annulus sealed with concrete to ground surface (ft bgs). The well was finished with riser mount protective metal cover, which was set approximately 1-foot into the concrete surface seal and approximately 4 feet above the ground surface. Well development was performed using pump and surge methods to remove debris from within the well casing and establish good communication with groundwater. Soil cuttings and development water were containerized in drums onsite. The well construction and development details are documented in the diagram provided in **Appendix A**.

2.5 Test Pit Excavations

TRC supervised JSS in the excavation of thirteen test pit excavations, AOC3-TP01 to AOC3-TP03, AOC10-TP01 and AOC10-TP02, AOC11-TP01 to AOC11-TP04, and AOC12-TP01 to AOC12-TP04 from December 13 to 15, 2022. The excavation of the test pits was conducted via a small track-mounted excavator to approximately 10 feet bgs. Soils at sample locations were logged by a TRC geologist using the Unified Soil Classification System. Test pit excavation dimensions were approximately 2.5 feet wide, 6 to 8 feet long, and final depths for the excavations were to 10 feet bgs and/or the depth of obstructions. Test pits shallower than 10 feet bgs were due to obstructions encountered. The test pit excavation locations are presented on Figure 2.

2.6 Monitoring Well and Test Pit Survey

The top of casing elevations and/or locations of the monitoring wells, test pits, and soil borings installed in December 2022 were professionally surveyed by BMJ Engineers and Surveyors, Inc. (BMJ) on December 22, 2022, and are shown on **Figure 2**.

2.7 Static Groundwater Elevations

Static groundwater elevation measurements were collected from the existing and new Southern Area monitoring wells on December 12 to 20, 2022, during the first groundwater sampling event. A second round of static groundwater elevations were collected from the existing Southern Area monitoring wells and new monitoring wells installed in December 2022 on March 20, 2023,

during the second groundwater sampling event. Static groundwater elevations collected from sampled monitoring wells in December 2022 and March 2023 are summarized in **Table 1** and presented on **Figures 3 and 4**, December 2022 and March 2023 Groundwater Contour Maps. The predominant groundwater flow direction along the Eastern Site Boundary is east.

2.8 Groundwater Sampling

Groundwater samples were collected for two events, the first in December 2022 and the second in March 2023 from the following Southern Area monitoring wells: MW-22-07 to MW-22-21, MW-22-22D, MW-101, MW-103, MW-128, and MW-129. MW-102 did not contain any water and was therefore not gauged or sampled for either event. Existing wells proposed to be sampled during these events (MW-122, MW-124, MW-125, MW-126, MW-126, MW-127, MW-130, MW-131, MW-132, MW-133) were not sampled as they could not be located and are assumed to be destroyed. The groundwater samples were collected using low-flow sampling procedures following stabilization according to United States Environmental Protection Agency (EPA) Low-Flow Ground-Water Sampling Procedures guidance. During both the December 2022 event and March 2023 event, three blind field duplicate samples, a field blank and an equipment blank were collected for quality assurance/quality control (QA/QC) purposes. The groundwater locations sampled during these events are presented on **Figure 2**. The groundwater samples were packed with “wet” ice and transported under chain of custody in a chilled cooler following collection to Merit Laboratories, Inc. (Merit) in Lansing, Michigan to be analyzed for the following at some or all sample locations:

- Full Michigan Part 201 Volatile Organic Compounds (VOCs) List + Tentatively Identified Compounds (TICs) by USEPA Method 8260B;
- 1,4 dioxane by USEPA Method 8260B
- Full Michigan Part 201 Semi-Volatile Organic Compounds (SVOCs) List + TICs by USEPA Method 8270D;
- Full Michigan Part 201 Total Metals List by USEPA Methods 6010B/6020A;
- Polychlorinated Bisphenols (PCBs) by USEPA Method 608.3; and
- Michigan List 31 Polyfluoroalkyl and perfluoroalkyl substances (PFAS) by ASTM Method D7979.

Additionally, groundwater samples from both events were transported under chain of custody to the Eurofins Environment Testing in Savannah, Georgia (Eurofins) to be analyzed for the following:

- Tetraethyl Lead by USEPA Method 8270D (select samples);
- Thorium by USEPA Method 6020B; and
- Alcohols (methanol, ethanol, and n-butanol) by USEPA Method 8015B;

Field notes for the groundwater sampling events are included as **Appendix B**.

2.9 Soil Sampling

Soil samples were collected during the December 2022 event from soil borings associated with monitoring wells MW-22-07 to MW-22-21, soil borings SB-01 and SB-02, and test pit excavations AOC3-TP01 to AOC3-TP03, AOC10-TP01 and AOC10-TP02, AOC11-TP01 to AOC11-TP04, and AOC12-TP01 to AOC12-TP04. The depths of the soil samples collected from the monitoring well soil borings and the stand-alone soil borings were at the 2 to 4 foot bgs interval and at the two foot interval immediately above the static water table at approximately 10 to 12 feet bgs. Test pit sample locations were located on the north, south, west, and east walls (designated as N, S, W and E) approximately 5 feet bgs and the floor/bottom of the excavation approximately 8.5 to 10 feet bgs (designated as B). Twelve blind field duplicate samples were collected for quality assurance/quality control (QA/QC) purposes. The monitoring well, test pit, and soil boring locations sampled during these events are presented on **Figure 2**. The soil samples were packed with “wet” ice and transported under chain of custody in a chilled cooler following collection to Merit in Lansing, Michigan to be analyzed for the following at some or all sample locations:

- Full Michigan Part 201 VOCs List + TICs by USEPA Method 8260B;
- 1,4 dioxane by USEPA Method 8260B
- Full Michigan Part 201 SVOCs List + TICs by USEPA Method 8270D;
- Full Michigan Part 201 Total Metals List by USEPA Methods 6010B/6020A;
- Polychlorinated Bisphenols (PCBs) by USEPA Method 608.3; and
- Michigan List 31 Polyfluoroalkyl and perfluoroalkyl substances (PFAS) by ASTM Method D7979.

Additionally, soil samples were transported under chain of custody to the Eurofins to be analyzed for the following:

- Tetraethyl Lead by USEPA Method 8270D (select samples);
- Thorium by USEPA Method 6020B; and
- Alcohols (methanol, ethanol, and n-butanol) by USEPA Method 8015C;

2.10 Quality Assurance Program

This section provides a summary of quality assurance procedures followed for sampling, analysis, and data evaluation for the sampling events. Project quality assurance was accomplished by implementing the quality control procedures detailed below.

2.10.1 Contaminant Free Sample Containers / Preservation Methods

Pre-cleaned and pre-preserved sample containers for all soil and groundwater samples were acquired from Merit. Upon collection, the samples were placed in a cooler containing sufficient ice sealed in plastic bags to cool and maintain each sample’s temperature at 4°C (± 1°C) through receipt by the laboratory. The temperature in the cooler was measured when samples were received at the laboratory, confirming that the 4°C temperature was maintained throughout the shipping/transport process.

2.10.2 Holding Times

Merit provided the holding times for the parameters to be analyzed. Holding times of each sample were compared to allowable holding times per each method of analysis. All analyses were performed within the allowable holding time (**Appendix C**).

2.10.3 Sample Documentation

Each sample was labeled with the following:

- Site identification
- Sampling date and time
- Sample identification or location and depth
- Sampling team
- Sample preservation method

2.10.4 Sample Transport and Delivery

Samples were picked up and transported under standard chain of custody (COC) procedures by Merit courier. The tetraethyl lead, thorium, and alcohols analysis was subcontracted from Merit to Eurofins.

2.10.5 Blind Field Duplicates

Blind field duplicate soil and groundwater samples were generally collected at a minimum 10 percent frequency. These samples were prepared by splitting a single sample between two separate containers. Locations where duplicate samples were collected were selected by field personnel to provide a range of expected contamination concentrations in the field and were submitted as blind duplicates to the laboratory.

2.10.6 Data Quality Review

Data from each round were evaluated for completeness, overall quality and usability, method-specified sample holding times, precision and accuracy, and potential sample contamination. The data were found to be complete and usable for the purposes of this report.

2.11 AOC 3 – SWMU 3 – Former Burial Area

The area designated as SWMU-3 (as originally defined in a Preliminary Assessment/Visual Site Inspection Report (PRC Environmental, 1994) is located within the eastern portion of the Site, within the northwest corner of the paved parking lot area. This location was a former burial area for various wastes utilized by Ethyl from approximately 1939 until 1955.

Constituents of Concern Previously Observed/Objective:

Soil -

Previously, as reported in the Atlas RFI work plan, a total of six soil borings (with three being converted to temporary monitoring wells) and four permanent monitoring wells were completed within and surrounding this AOC. Of the six soil borings installed, five soil samples were

analyzed between the years 2012 and 2015: SB/TMW-8 (1-2'), SB- 11 (10-12'), SB-12 (10-12'), SB-20 (10-12'), and PSB-144 (8-9'). Soil samples were not analyzed for borings SB/TMW-8R or monitoring wells MW-8, MW-9, MW-10 or MW-H. Only bolded COCs had concentrations that exceeded their most restrictive cleanup criteria:

The following chemicals of concern (COCs) were detected between 2012 and 2015:

- VOCs: 2-methylnaphthalene at SB-11 (10-12') and SB-12 (10-12') and trichloroethylene at SB-12 (10-12').
- Polynuclear aromatics (PNAs) (full scan SVOC analysis was not conducted): none detected at PSB-144 (8-9'). The remainder of the soil samples were not analyzed for PNAs.
- Metals: arsenic, barium, chromium, copper, lead, and zinc at SB/TMW-8 (1-2') and PSB-144 (8-9'). Mercury was also detected at SB/TMW-8 (1-2').
- PCBs: none detected at SB/TMW-8 (1-2'). The remainder of the soil samples were not analyzed for PCBs.

Groundwater -

As reported in the Atlas RFI work plan, previous groundwater analytical data for monitoring well MW-8 has not been disclosed and/or the well was not sampled historically. Groundwater samples collected in 2012 from MW-9, MW-10 and MW-H; as well as groundwater samples collected in 2015/2016 from temporary monitoring wells SB/TMW-8 and SB/TMW-8R, had the following detected COCs (only bolded COCs had concentrations that exceeded their most restrictive cleanup criteria):

- VOCs: **1,2-dichlorobenzene (SB/TMW-8 and SB/TMW-8R); trichloroethylene (MW-9 and MW-10)**; chlorobenzene (MW-9) and 1,4-dichlorobenzene (SB/TMW-8 and SB/TMW-8R).
- PNAs/SVOCs (full scan SVOC analysis was not completed): none detected above laboratory reporting levels (RLs).
- Metals: barium, copper and/or zinc (MW-10 and SB/TMW-8). The remainder of the wells did not have groundwater samples analyzed for metals.
- PCBs: groundwater samples were not analyzed for PCBs.

Further delineation of VOCs and metals detected (in particular, 2-methylnaphthalene, trichloroethylene and 1,2-dichlorobenzene) in soil and groundwater for COCs potentially associated with the reported buried laboratory wastes, and physical and chemical characterization and vertical and horizontal delineation of potential groundwater impacts form the objective for this AOC investigation. The unspecified laboratory wastes could be associated with virtually any chemicals used, stored, managed, or disposed onsite. COCs should target a broad spectrum of analysis to ensure current comprehensive analyses are completed.

2022-2023 Completed Assessment

Provided the historical use of this area as a former burial pit for various unidentified wastes, TRC provided oversight for the planned assessment including the completion of four test pits (AOC3-TP01 through AOC3-TP-04) on December 14, 2022. Soil samples were collected from each north, south, east and west sidewall and the bottom of each test pit, with sampling completed

biased to the most contaminated interval if any were identified.

TRC provided oversight for the installation of two permanent monitoring wells MW-22-11 and MW-22-12 on December 13, 2022, within the northwestern and southeastern portions of SWMU-3 to evaluate soil and groundwater conditions in a cross-gradient direction. The monitoring wells were screened to the base of the sand unit and in contact with the underlying clay unit at 12.5-17.5 ft bgs and 15-20 ft bgs respectively. Soil samples were collected from these borings at 2-4 ft bgs and just above the water table at 8-10 ft bgs.

Groundwater sampling at newly installed monitoring wells MW-22-11 and MW-22-12 was completed via low flow techniques in December 2022 and March 2023. Existing monitoring wells MW-130 and MW-131 were to be sampled as well but could not be located. These wells will be attempted to be located as part of the next work plan discussed in Section 5.0. If the wells are found in good condition, they will be sampled one time as discussed in Section 5.0. If the wells are found to be destroyed, they will be properly abandoned.

Soil and groundwater samples collected from each test pit and soil boring/monitoring wells were analyzed by Merit for the following COCs as proposed in the RFI:

- Full Michigan Part 201 VOC list + TICs
- 1-4 dioxane
- Alcohols (methanol, ethanol, and n-butanol)
- Full Michigan Part 201 SVOC list + TICs
- Full Michigan Part 201 Total Metals list
- Polychlorinated Biphenyls (PCBs) (by individual Aroclor). PCBs in groundwater were not analyzed during the March 2023 event due to no detections in the December 2022 event. This was accepted by Joe Rogers of the EGLE during a phone call on March 15, 2023 and confirmed in an EGLE email dated March 28, 2023.
- Michigan List 31 PFAS

2.12 AOC 7 – PCE/TCE

AOC 7 contained historical Building H, which was utilized for fuel and oil blending. This former building was situated in between former Building B, which was utilized for experimental operations, a machine shop, and vehicle servicing and former Building C, which was utilized for engine research and dynamometer, fuel testing and control testing.

Constituents of Concern Previously Observed/Objective:

Soil -

Previously, as reported in the Atlas RFI, a total of six soil borings (with three being converted to temporary monitoring wells and one converted to a permanent monitoring well) were evaluated within and surrounding this AOC. Of the six soil borings installed, seven soil samples were analyzed between the years 2012 and 2020: SB-3 (10-12'), SB-4 (10-12'), SB/TMW-15 (1-2'), SB/TMW-16 (1-2'), SB/TMW-18 (7-8') and MW-126 (4-5') and (7.5-8.5'). Additionally, two temporary soil vapor points, E-3 and E-4 were installed in 2019.

The following COCs were previously detected (only bolded COCs had concentrations that exceeded their most restrictive cleanup criteria):

- VOCs: **naphthalene**, 2-methylnaphthalene and trichlorofluoromethane at **TMW/SB-18 (7-8')**. VOCs were not detected in remaining samples analyzed.
- PNAs/SVOCs: Full scan SVOC analysis was only completed at the MW-126 location. **Up to 14 PNAs were detected at SB/TMW-18 (7-8') with multiple constituents exceeding the most restrictive cleanup criteria.** Select PNAs/SVOCs were also detected at SB-3 (10-12'), SB/TMW-16 (1-2'), SB/TMW-18 (7-8') and MW-126 (4-5'), below their respective cleanup criteria.
- Metals: multiple metals (including arsenic, barium, cadmium, chromium etc.) were detected at all samples analyzed. **Mercury was detected at SB/TMW-16 (1-2') and SB/TMW-18 (7-8') above default background levels** and at SB-3 (10-12') below the default background level.
- PCBs: Were not detected above the RLs.

Groundwater –

According to prior reports, groundwater samples were not collected from temporary monitoring well SB/TMW-15. Groundwater samples collected in 2016 from temporary monitoring wells SB/TMW-16 and SB/TMW-18, as well as groundwater samples collected in 2020 from monitoring well MW-126, detected the following COCs (only bolded COCs had concentrations that exceeded the most restrictive cleanup criteria):

- VOCs: **tetrachloroethylene at SB/TMW-16, SB/TMW-18 and MW-126; trichloroethylene at MW-126;** trichlorofluoromethane at SB/TMW-16 and SB/TMW-18; and 1,1-dichloroethylene at SB/TMW-18.
- SVOCs: Were not detected above the RLs.
- Metals: up to 10 metals were detected in each sample collected, including **aluminum, boron, iron, manganese, and vanadium at MW-126.**

PCBs: none detected at MW-126. Groundwater samples collected from SB/TMW-16 and SB/TMW-18 were not analyzed for PCBs.

2022-2023 Completed Assessment

TRC provided oversight for the installation of two permanent monitoring wells MW-22-08 and MW-22-09 on December 12, 2022, located within the central and northwestern portions of the AOC. The monitoring wells were screened to the base of the sand unit and in contact with the underlying clay unit at 15-20 ft bgs and 17-22 ft bgs respectively. Soil samples were collected from these borings at 2-4 ft bgs and just above the water table at 8-10 ft bgs.

Groundwater sampling at newly installed monitoring wells MW-22-08 and MW-22-09 was completed via low flow techniques in December 2022 and March 2023. Existing monitoring well MW-126 was to be sampled but could not be located. This well will be attempted to be located as part of the next work plan discussed in Section 5.0. If the well is found in good condition, it will be sampled one time as discussed in Section 5.0. If the well is found to be destroyed, it will be properly abandoned and replaced.

Soil and groundwater samples collected from each test pit and soil boring/monitoring wells were analyzed by Merit for the following as proposed in the RFI:

- Full Michigan Part 201 VOC list + TICs
- 1-4 dioxane
- Alcohols (methanol, ethanol, and n-butanol)
- Full Part 201 SVOC list + TICs
- Full Part 201 Total Metals list
- PCBs (by individual Aroclor). PCBs in groundwater were not analyzed during the March 2023 event due to no detections in the December 2022 event. This was accepted by Joe Rogers of the EGLE during a phone call on March 15, 2023, and confirmed in an EGLE email dated March 28, 2023.
- Michigan List 31 PFAS
- Tetraethyl Lead. Tetraethyl lead in groundwater was not analyzed during the March 2023 event due to no detections in the December 2022 event. This was accepted by Joe Rogers of the EGLE during a phone call on March 15, 2023, and confirmed in an EGLE email dated March 28, 2023.

2.13 AOC 8 – PFOA/PFOS

AOC 8 contained historical Building D, of which the former operations occurring at this building are unknown. This former building was situated in between former Building DA, which was utilized for chemical research and former Building C, which was utilized for engine research and dynamometer, fuel testing and control testing.

Constituents of Concern Previously Observed/Objective:

Soil-

Previously, as reported in the Atlas RFI, a total of seven soil borings (with two being converted to temporary monitoring wells and four converted to a permanent monitoring well) were evaluated within and surrounding this AOC. Of the seven soil borings installed, nine soil samples were analyzed between the years 2012 and 2020: SB/TMW-20 (1-2'), SB-21 (10-12'), SB/TMW-30 (8-9'), MW-128 (4-5') and (8-9'), MW-129 (3-4'), MW-132 (5.5-6.5') and MW-133 (3-4') and (10-11').

The following COCs were detected (only bolded COCs had concentrations that exceeded the most restrictive cleanup criteria):

- VOCs: Were not detected above the RLs.
- PNAs/SVOCs: Full scan SVOC analysis was only completed at MW-128, MW-129, MW-132 and MW-133 locations. Multiple SVOCs were detected with **benzo(b)pyrene, carbazole, dibenzofuran, fluoranthene, naphthalene and/or phenanthrene exceeding the most restrictive cleanup criteria at each sample**. PNAs were not detected in remaining samples analyzed.

- Metals: multiple metals (including arsenic, barium, cadmium, chromium etc.) were detected at all samples analyzed, with the exception of SB-20 and SB/TMW-30, which were not analyzed for metals. **Mercury was detected at MW-129 (3-4'), MW-132 (5.5-6.5'), MW-133 (3-4') and (10-11') above default background levels and VIAP screening levels.**
- PCBs: Were not detected above the RLs.

Groundwater –

Previously, as reported in the Atlas RFI, groundwater samples collected in 2016 from temporary monitoring wells SB/TMW-20 and SB/TMW-30, as well as groundwater samples collected in 2020 from monitoring wells MW-128, MW-129, MW-132 and MW-133, detected the following COCs (only bolded COCs had concentrations that exceeded their most restrictive cleanup criteria):

- VOCs: trichlorofluoromethane at SB/TMW-20 and SB/TMW-30; and 1,1-dichloroethylene at SB/TMW-20; **tetrachloroethylene at MW-128; trichloroethylene at MW-129;** acetone, chloromethane, 1,4-dioxane, **ethylbenzene, naphthalene,** toluene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, xylene and **methanol at MW-132;** and chloromethane and **naphthalene at MW-133.**
- SVOCs: **carbazole,** fluoranthene, **naphthalene,** 2-nitrophenol, 4-nitrophenol, **phenanthrene** and phenol at **MW-132;** **carbazole,** fluoranthene, naphthalene and **phenanthrene at MW-133.**
- Metals: multiple metals (including arsenic, barium, cadmium, chromium etc.) were detected at all samples analyzed, with the exception of SB/TMW-30, which was not analyzed for metals. **Boron was detected in MW-128, MW-129 and MW-133.**
- PCBs: Were not detected above the RLs.
- PFAS: A total of ten PFAS compounds were detected at MW-128, MW-129, MW-132 and MW-133 with **Perfluorooctanoic acid (PFOA), Perfluorononanoic acid (PFNA) and/or Perfluorooctane sulfonic acid (PFOS)** exceeding the most restrictive cleanup criteria.

2022-2023 Completed Assessment

TRC provided oversight for the installation of two permanent monitoring wells MW-22-18 and MW-22-19 on December 15, 2022, along the eastern/southeastern border of this area to determine if PFAS concentrations are migrating in a horizontal downgradient direction. The monitoring wells were screened to the base of the sand unit and in contact with the underlying clay unit at 16-21 ft bgs and 17-22 ft bgs respectively. Soil samples were collected from these borings at 2-4 ft bgs and just above the water table at 8-10 ft bgs. Wells were installed in contact with the underlying clay unit due to the presence of chlorinated solvents in this area. Attempting to identify the source of PFAS concentrations was also included in the assessment activities.

Groundwater sampling at newly installed monitoring wells MW-22-18 and MW-22-19 and existing monitoring wells MW-128 and MW-129 was completed via low flow techniques in December 2022 and March 2023. Existing monitoring wells MW-132 and MW-133 were to be sampled as well but could not be located. These wells will be attempted to be located as part of the next work plan discussed in Section 5.0. If the wells are found in good condition, they will be sampled one time per Section 5.0. If they are found destroyed, they will be properly abandoned.

Soil and groundwater samples collected from each test pit and soil boring/monitoring wells were analyzed by Merit for the following as proposed in the RFI:

- Full Michigan Part 201 VOC list + TICs
- 1-4 dioxane
- Alcohols (methanol, ethanol, and n-butanol)
- Full Michigan Part 201 SVOC list + TICs
- Full Michigan Part 201 Total Metals list
- Polychlorinated Biphenyls (PCBs) (by individual Aroclor). PCBs in groundwater were not analyzed during the March 2023 event due to no detections in the December 2022 event. This was accepted by Joe Rogers of the EGLE during a phone call on March 15, 2023 and confirmed in an EGLE email dated March 28, 2023.
- Michigan List 31 PFAS

2.14 AOC 9 – Neutralization Basin/Former UST Area

The area of a former neutralization basin and former UST is located along the southeastern portion of the Southern Area.

Constituents of Concern Previously Observed/Objective:

Soil -

Previously, as reported in the Atlas RFI, a total of five soil borings (with three being converted to temporary monitoring wells and two permanent monitoring wells) were completed within and surrounding this AOC. Of the soil borings installed, four soil samples were analyzed between the years 2012 and 2016: SB-8 (10-12'), SB/TMW-19 (1-2'), SB/TMW-20 (1-2') and SB/TMW-31 (7-8'). Soil samples were not collected during the installation of monitoring wells MW-D and MW-E.

The following COCs were detected (only bolded COCs had concentrations that exceeded their most restrictive cleanup criteria):

- VOCs: trichloroethylene at SB/TMW-19 (1-2'); 2-methylnaphthalene, naphthalene and 1,2,4-trimethylbenzene at SB-8 (10-12'). VOCs were not detected above the RLs in the remaining samples analyzed.
- PNAs (full scan SVOC analysis was not conducted): Were not detected above the RLs.
- Metals: arsenic, barium, chromium, copper, lead and zinc at SB/TMW-19 (1-2') and SB/TMW-20 (1-2'). Remaining soil samples were not analyzed for metals.
- PCBs: Were not detected above RLs.

Groundwater –

Previously, groundwater samples collected in 2012 from monitoring wells MW-D and MW-E, as well as from temporary monitoring wells SB/TMW-19, SB/TMW-20 and SB/TMW-31 in 2015 and 2016, detected the following COCs (only bolded COCs exceeded their most restrictive cleanup criteria):

- VOCs: chlorobenzene, 1,1-dichloroethylene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene and/or trichlorofluoromethane at SB/TMW-19, SB/TMW-20 and SB/TMW-31.
- Tetrachloroethylene at MW-E. No detections above the RLs at MW-D.
- PNAs (full scan SVOC analysis was not completed): Diethyl phthalate at MW-E. No PNAs were detected in groundwater above RLs at remaining wells.
- Metals: arsenic, barium, copper and/or zinc at SB/TMW-19 and SB/TMW-20. Groundwater samples collected from SB/TMW-31, MW-D and MW-E were not analyzed for metals.
- PCBs: Groundwater samples were not analyzed for PCBs.

2022-2023 Completed Assessment:

TRC provided oversight for the completion of soil borings SB-01 and SB-02 on December 14, 2022, within the area of the identified electromagnetic anomalies present in the central-southern/southeastern portions of the area, which coincide with the location of the former USTs. The soil borings were advanced to the base of the sand unit and in contact with the underlying clay unit at 20 ft bgs. Soil samples were collected from these borings at 2-4 ft bgs and just above the water table at 8-10 ft bgs to evaluate for the presence of buried orphaned tanks/sumps/vaults.

TRC provided oversight for the installation of three permanent monitoring wells MW-22-13, MW-22-14, and MW-22-15 by on December 14, 2022, within the northern, eastern, southeastern and western portions of the AOC to evaluate soil and groundwater conditions in a cross-gradient direction. Wells were screened to the base of the sand unit and in contact with the underlying clay unit at 13-18 ft bgs, 13-18, and 14-19 ft bgs, respectively. Soil samples were collected from these borings at 2-4 ft bgs and just above the water table at 8-10 ft bgs.

Groundwater sampling at newly installed monitoring wells MW-22-13, MW-22-14, and MW-22-15 was completed via low flow techniques in December 2022 and March 2023.

Soil and groundwater samples collected from each test pit and soil boring/monitoring wells were analyzed by Merit for the following as proposed in the RFI:

- Full Michigan Part 201 VOC list + tentatively identified compounds (TICs)
- 1-4 dioxane
- Alcohols (methanol, ethanol, and n-butanol)
- Full Michigan Part 201 SVOC list + TICs
- Full Michigan Part 201 Total Metals list
- Polychlorinated Biphenyls (PCBs) (by individual Aroclor). PCBs in groundwater were not analyzed during the March 2023 event due to no detections in the December 2022 event. This was accepted by Joe Rogers of the EGLE during a phone call on March 15, 2023, and confirmed in an EGLE email dated March 28, 2023.
- Michigan List 31 PFAS

- Tetraethyl Lead. Tetraethyl lead in groundwater was not analyzed during the March 2023 event due to no detections in the December 2022 event. This was accepted by Joe Rogers of the EGLE during a phone call on March 15, 2023, and confirmed in an EGLE email dated March 28, 2023.

2.15 AOC 10 – Former Heating Oil UST/EMI Interference – GPR Anomaly

Electromagnetic induction conducted indicated the presence of deep and shallow voids within the subsurface of this area, which is located within the southern-central portion of the Southern Area. Furthermore, a GPR survey conducted within this area indicated an anomaly within the subsurface. According to historical documentation, a former heating oil UST was located within this area.

Constituents of Concern Previously Observed/Objective:

Soil –

Previously, as reported in the Atlas RFI, a total of seven soil borings (with one being converted to a temporary monitoring well and two permanent monitoring wells) were completed within and surrounding this AOC. Of the seven soil borings installed, seven soil samples were analyzed between 2012 and 2020: SB-7 (10- 12'), SB-25 (10-12'), SB-26 (12-14'), SB-27 (10-12'), SB/TMW-32 (8-9') and MW-127 (6-7') and (10-11'). Soil samples were not collected during the installation of monitoring well MW-C.

The following COCs were detected (only bolded COCs had concentrations that exceeded their most restrictive cleanup criteria):

- VOCs: A total of 26 VOCs were detected from samples collected at SB-7 (10-12'), SB-25 (10-12'), SB-26 (12-14') and SB-27 (10-12'). Specifically, **benzene, chlorobenzene, ethylbenzene, 2-methylnaphthalene, naphthalene, toluene, 1,2,3-, 1,2,4- and 1,3,5-trimethylbenzene, xylenes, and/or 1,2-, 1,3- and 1,4-dicholobenzene were detected in excess of cleanup criteria at these sample locations.** Samples collected from SB/TMW-32 (8-9') and MW-127 (6-7') and (10-11') did not have VOCs detected above their respective RLs.
- PNAs/SVOCs: Full scan SVOC analysis was only completed at the MW-127 location. Up to 10 PNAs were detected at the SB-7 (10-12'), SB-25 (10-12'), SB-27 (7-8') and MW-127 (10-11') with **acenaphthene, acenaphthylene, anthracene, chrysene, fluorene and/or phenanthrene exceeding the most restrictive cleanup criteria.** SB/TMW-32 (8-9') did not have any PNA detections. SB-26 (12-14') was not analyzed for PNAs.
- Metals: arsenic, barium, chromium, copper, lead, selenium and/or zinc at SB-7 (10-12'), SB-25 (10-12') and SB-27 (10-12'). Mercury was also detected at SB-27 (10-12') below default background levels. Expanded metal analysis was completed at MW-127 (6-7') and (10-11') which indicated 16 metals including **aluminum, cobalt, iron and manganese above their most restrictive cleanup criteria.** SB-26 (12-14') was not analyzed for metals.
- PCBs: Were not detected above RLs.

Groundwater –

Previously, as reported in the Atlas RFI, groundwater samples collected in 2016 from temporary monitoring well SB/TMW-32, as well as groundwater samples collected in 2020 from monitoring well MW-127, detected the following COCs (only bolded COCs exceeded their most restrictive cleanup criteria):

- VOCs: **chlorobenzene, 2-methylnaphthalene and naphthalene** at SB/TMW-32; chlorobenzene, 2-methylnaphthalene, **naphthalene**, trichlorofluoromethane, 1,2,4- and 1,3,5- trimethylbenzene, and xylenes at MW-127.
- PNAs/SVOCs (full scan SVOC analysis was only completed at MW-127): acenaphthylene, fluorene, **naphthalene, phenanthrene and 2-methylnaphthalene** at SB/TMW-32; benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, **fluoranthene and phenanthrene** at MW-127.
- Metals: A total of 11 metals were detected at MW-127. Specifically, **aluminum, iron, manganese and vanadium** exceeded the most restrictive cleanup criteria at MW-127. Groundwater at SB/TMW-32 was not analyzed for metals.
- PCBs: Were not detected above RLs at MW-127. Groundwater at SB/TMW-32 was not analyzed for PCBs.
- PFAS: Seven PFAS compounds were detected at MW-127 with **PFOA and PFOS** exceeding the most restrictive cleanup criteria.

2022-2023 Completed Assessment:

Provided the historical use of this area as a location for heating oil USTs, TRC provided oversight for the planned assessment including the completion of two test pits, within the area of the identified electromagnetic anomalies present in the near monitoring well MW-127. Test Pits (AOC10-TP01 and AOC10-TP-02) were excavated on December 12, 2022. Soil samples were collected from the sidewalls and the bottom of each test pit, with sampling completed biased to the most qualitatively contaminated interval, if any were identified.

TRC provided oversight for the installation of two permanent monitoring wells MW-22-16 and MW-22-17 on December 14 and 15, 2022. The monitoring wells were screened to the base of the sand unit and in contact with the underlying clay unit at 15-20 and 14-19 ft bgs respectively. Soil samples were collected from these borings at 2-4 ft bgs and just above the water table at 8-10 ft bgs.

Groundwater sampling at newly installed monitoring wells MW-22-14, MW-22-15, and MW-22-16 was completed via low flow techniques in December 2022 and March 2023. Existing monitoring wells MW-122, MW-123, and MW-127 were to be sampled as well but could not be located. These wells will be attempted to be located as part of the next work plan discussed in Section 5.0. If the wells are found to be damaged, they will be properly abandoned and MW-127 will be replaced. If the wells are found in good condition and not damaged, groundwater samples will be collected one time from each well for the analyte list discussed in section 5.0.

Soil and groundwater samples collected from each test pit and soil boring/monitoring wells were analyzed by Merit for the following as proposed in the RFI:

- Full Michigan Part 201 VOC list + tentatively identified compounds (TICs)

- 1-4 dioxane
- Alcohols (methanol, ethanol, and n-butanol)
- Full Michigan Part 201 SVOC list + TICs
- Full Michigan Part 201 Total Metals list
- Polychlorinated Biphenyls (PCBs) (by individual Aroclor). PCBs in groundwater were not analyzed during the March 2023 event due to no detections in the December 2022 event. This was accepted by Joe Rogers of the EGLE during a phone call on March 15, 2023, and confirmed in an EGLE email dated March 28, 2023.
- Michigan List 31 PFAS

2.16 AOC 11 – Former UST Area/EMI Interference

Electromagnetic induction conducted indicated the presence of deep and shallow voids within the subsurface of this area, which is located within the southern-central portion of the Southern AOC Area. According to historical documentation, USTs were formerly located within this area.

Constituents of Concern Previously Observed/Objective:

Soil -

Previously, as reported in the Atlas RFI, a total of nine soil borings (with one being converted to a temporary monitoring well and five permanent monitoring wells) were evaluated within and surrounding this AOC. Of the nine soil borings installed, six soil samples were analyzed between the years 2012 and 2020: SB-5 (10-12'), SB-6 (10-12'), SB-14 (10-12'), SB/TMW-14 (1-2'), MW-124 (4-5') and MW-125 (4-5'). Soil samples were not collected during the installation of monitoring wells MW-A or MW-B. Additionally four temporary soil vapor points, C-3, C-4, D-3 and D-4 were installed in 2019.

The following COCs were detected (only bolded COCs had concentrations that exceeded their most restrictive cleanup criteria):

- VOCs: 2-methylnaphthalene, naphthalene, n-propylbenzene, 1,2,3- 1,2,4- and 1,3,5-trimethylbenzene at SB-6 (10-12'); n-butylbenzene, sec-butylbenzene, chlorobenzene at SB-14 (10-12'); **n-butylbenzene, sec-butylbenzene, isopropylbenzene, ethylbenzene, 2-methylnaphthalene, naphthalene**, p-isopropyltoluene, **n-propylbenzene, 1,2,3- 1,2,4- and 1,3,5-trimethylbenzene, xylenes at SB-5 (10-12')**. VOCs were not detected above their respective RLs in remaining samples analyzed.
- PNAs/SVOCs: Full scan SVOC analysis was only completed at MW-124 and MW-125 locations. Up to nine PNAs were detected at the SB/TMW-14 (1-2') location with none exceeding the most restrictive cleanup criteria. Eleven SVOCs were detected at the MW-125 (4-5') sample with **phenanthrene exceeding the most restrictive cleanup criteria**. SVOCs were not detected in MW-124 (4-5'). Samples collected from SB-5 (10-12'), SB-6 (10-12') and SB-14 (10-12') were not analyzed for PNAs.
- Metals: arsenic, barium, cadmium, chromium, copper, lead and zinc were detected at SB/TMW-14 (1-2'), along with **mercury which was detected in exceedance of its default background level**. Expanded metal analysis was completed at MW-124 (4-5') and MW-125 (4-5') which indicated 21 metals detected, of which **aluminum, cobalt, iron, manganese**

and/or silver above their most restrictive cleanup criteria. Additionally, mercury was detected exceeding VIAP screening levels at MW-125 (4-5’). SB-5 (10-12’), SB-6 (10-12’) and SB-14 (10-12’) were not analyzed for metals.

- PCBs: Were not detected above RLs.

Groundwater –

Previously, as reported in the Atlas RFI, groundwater samples were not collected from MW-B. Groundwater samples collected in 2012 from monitoring well MW-A, groundwater samples collected in 2015 from temporary monitoring well SB/TMW-14, as well as groundwater samples collected in 2020 from monitoring wells MW-124 and MW-125, detected the following COCs (only bolded COCs had concentrations that exceeded their most restrictive cleanup criteria):

- VOCs: 1,2-dichlorobenzene at MW-A; and chloroethane, trichlorofluoromethane and **vinyl chloride at SB/TMW-14**. VOCs were not detected above RLs in groundwater samples collected from MW-124 or MW-125.
- PNAs/SVOCs (full scan SVOC analysis was only completed at MW-124 and MW-125): Were not detected above RLs in groundwater samples collected from SB/TMW-14, MW-124 and MW-125. Groundwater at MW-A was not analyzed for PNAs/SVOCs.
- Metals: arsenic and barium at SB/TMW-14. A total of nine metals, of which **aluminum, iron and manganese were detected at levels exceeding the most restrictive cleanup criteria at MW- 124 and MW-125**. Groundwater at MW-A was not analyzed for metals.
- PCBs: Were not detected above RLs at MW-125. Groundwater samples collected from SB/TMW-14, MW-A and MW-124 were not analyzed for PCBs.

Soil Gas –

Previously, as reported in the Atlas RFI, soil gas samples collected from temporary soil gas points C-3, C-4, D-3 and D-4, set at a depth of 5 feet bgs detected multiple VOCs and/or SVOCs. However, all concentrations were below their respective VIAP screening levels with the exception of **trichloroethylene at C-3**.

2022-2023 Completed Assessment:

Provided the historical use of this area as a former location of multiple USTs, TRC provided oversight for the planned assessment including the completion of up to four test pits (AOC11-TP01 through AOC11-TP-04) on December 14, 2022, which were completed to either the obstruction from concrete at 8.5 to 9.5 feet bgs or to the extent of the excavator approximately 10 feet bgs. Soil samples were collected from the sidewalls and the bottom of each test pit, with sampling completed biased to the most contaminated interval if any were identified.

TRC provided oversight for the installation of two permanent monitoring wells MW-22-07 and MW-22-10 on December 13, 2022. The monitoring wells were screened to the base of the sand unit and in contact with the underlying clay unit at 14-19 ft bgs and 15-20 ft bgs respectively. Soil samples were collected from these borings at 2-4 ft bgs and just above the water table at 8-10 ft bgs.

Groundwater sampling at newly installed monitoring wells MW-22-07 and MW-22-10 was completed via low flow techniques in December 2022 and March 2023. Existing monitoring wells MW-124 and MW-125 were to be sampled as well but could not be located. These wells will be attempted to be located as part of the next work plan discussed in Section 5.0. If the wells are found in good condition, they will be sampled one time per Section 5.0. If they are found destroyed, they will be properly abandoned.

Soil and groundwater samples collected from each test pit and soil boring/monitoring wells were analyzed by Merit for the following as proposed in the RFI:

- Full Michigan Part 201 VOC list + TICs
- 1-4 dioxane
- Alcohols (methanol, ethanol, and n-butanol)
- Full Michigan Part 201 SVOC list + TICs
- Full Michigan Part 201 Total Metals list
- Polychlorinated Biphenyls (PCBs) (by individual Aroclor). PCBs in groundwater were not analyzed during the March 2023 event due to no detections in the December 2022 event. This was accepted by Joe Rogers of the EGLE during a phone call on March 15, 2023, and confirmed in an EGLE email dated March 28, 2023.
- Michigan List 31 PFAS
- Tetraethyl Lead. Tetraethyl lead in groundwater was additionally not analyzed during the March 2023 event due to no detections in the December 2022 event. This was accepted by Joe Rogers of the EGLE during a phone call on March 15, 2023, and confirmed in an EGLE email dated March 28, 2023.

Also, if the source of soil gas vapors was identified, three soil gas vapor points were planned to be installed within the subsurface (one upgradient and two downgradient) targeting that location. The source of the soil gas impacts was not encountered, therefore additional soil gas vapor points were not installed. Refer to the Results section for additional information.

2.17 AOC 12 – EMI Interference – GPR Anomaly

Electromagnetic induction conducted indicated the presence of a large deep void within the subsurface of this area, which is located within the southern portion of the Southern AOC Area. Furthermore, a GPR survey conducted within this area indicated an anomaly within the subsurface.

Constituents of Concern Previously Observed/Objective:

Soil –

Previously, as reported in the Atlas RFI, a total of three soil borings (all of which were converted to permanent monitoring wells) were evaluated surrounding this AOC. Of the three soil borings installed, three soil samples were analyzed in 2020: MW-101 (2-3'), MW-102 (2-3') and MW-132 (5.5-6.5'). Additionally, two temporary soil vapor points, F-3 and F-4 were installed in 2019.

The following COCs were detected (only bolded COCs had concentrations that exceeded their most restrictive cleanup criteria):

- VOCs: Were not detected above RLs at MW-132 (5.5-6.5'). The soil samples collected from MW-101 (2-3') and MW-102 (2-3') were not analyzed for VOCs.
- PNAs/SVOCs: Multiple SVOCs were detected with **naphthalene and phenanthrene exceeding the most restrictive cleanup criteria at MW-132 (5.5-6.5')**. The soil samples collected from MW-101 (2-3') and MW-102 (2-3') were not analyzed for SVOCs.
- Metals: arsenic, barium and/or chromium were detected at MW-101 (2-3') and MW-102 (2-3'). Multiple metals were detected at **MW-132 (5.5-6.5') with arsenic, boron, iron, magnesium, manganese and molybdenum exceeding the most restrictive cleanup criteria**. Additionally, **mercury was detected exceeding the VIAP screening level at MW-102 (2-3') and MW-132 (5.5-6.5')**.
- PCBs: Were not detected above RLs at MW-132 (5.5-6.5'). The soil samples collected from MW-101 (2-3') and MW-102 (2-3') were not analyzed for PCBs.

Groundwater –

Previously, as reported in the Atlas RFI, Groundwater samples collected in 2020 from monitoring wells MW-101, MW-102 and MW-132, detected the following COCs (only bolded COCs had concentrations that exceeded their most restrictive cleanup criteria):

- VOCs: acetone, chloromethane, 1,4-dioxane, **ethylbenzene, naphthalene**, toluene, 1,2,4- and 1,3,5-trimethylbenzene, xylene and **methanol** were detected at **MW-132**. VOCs were not detected above their respective RLs at MW-101 or MW-102.
- SVOCs: **carbazole**, fluoranthene, **naphthalene**, 2- and 4-nitrophenol, **phenanthrene** and phenol were detected at MW-132. SVOCs were not detected above their respective RLs at MW-101 or MW-102.
- Metals: a total of ten metals, of which **aluminum and lead were detected at levels exceeding the most restrictive cleanup criteria at MW-132**. MW-101 and MW-102 had no detections above their respective RLs for the select metals analyzed.
- PCBs: Were not detected above the RLs at MW-132. The groundwater samples collected from MW-101 and MW-102 were not analyzed for PCBs.
- PFAS: Nine PFAS compounds were detected between MW-101, MW-102 and MW-132, with **PFOA and PFOS** exceeding the most restrictive screening levels at **MW-132**.

Soil Gas –

Soil gas samples collected from temporary soil gas points F-3 and F-4, set at a depth of 5 feet bgs, detected multiple VOCs and/or SVOCs, however all detections were below their respective VIAP screening levels.

2022-2023 Completed Assessment:

Provided the presence of a large deep void within the subsurface, TRC provided oversight for the planned assessment including the completion of up to three test pits (AOC12-TP01 through AOC12-TP-03) on December 15, 2022. Soil samples were collected from the sidewalls and the bottom of each test pit, with sampling completed biased to the most contaminated interval if any

were identified.

TRC provided oversight for the installation of two permanent monitoring wells MW-22-20 and MW-22-21 on December 13, 2022, on December 15 and 16, 2022 respectively. The monitoring wells were screened to the base of the sand unit and in contact with the underlying clay unit at 17-22 ft bgs. Soil samples were collected from these borings at 2-4 ft bgs and just above the water table at 8-10 ft bgs.

Groundwater sampling at newly installed monitoring wells MW-22-20 and MW-22-21 and existing monitoring wells MW-101 and MW-103 was completed via low flow techniques in December 2022 and March 2023. Existing monitoring well MW-102 was dry for both events and was unable to be sampled. Due to MW-102 being dry and likely filled in with sediment, this well will be properly abandoned and replaced as part of the next work plan discussed in Section 5.0.

Soil and groundwater samples collected from each test pit and soil boring/monitoring wells were analyzed by Merit for the following as proposed in the RFI:

- Full Michigan Part 201 VOC list + TICs
- 1-4 dioxane
- Alcohols (methanol, ethanol, and n-butanol)
- Full Michigan Part 201 SVOC list + TICs
- Full Michigan Part 201 Total Metals list
- Polychlorinated Biphenyls (PCBs) (by individual Aroclor). PCBs in groundwater were not analyzed during the March 2023 event due to no detections in the December 2022 event. This was accepted by Joe Rogers of the EGLE during a phone call on March 15, 2023 and confirmed in an EGLE email dated March 28, 2023.
- Michigan List 31 PFAS

2.18 Site Wide Investigation

The purpose of the Site Wide Investigation is to create a holistic, site-wide approach to the investigation of the Site. Activities to be performed during the Site Wide Investigation include 1) the vertical delineation of overburden to provide a better understanding of the overall deep lithology (greater than the current maximum explored depth of 25 feet bgs); and 2) assess potential preferential pathways created by utility corridors and/or known underground tunnels on the Site.

The Site Wide Investigation ran in tandem with the proposed assessment of the Southern Area, as all known tunnels and the majority of the known utilities are located within the Southern Area as well as the planned deep well. Locations of the sampling for the Site Wide Investigation is shown primarily on **Figure 2**.

2022-2023 Completed Assessment:

Vertical delineation of overburden

Based on the data collected to date, there is reasonable knowledge of site-related COCs present in the overburden, particularly at the water table interface. The scope of proposed RFI work in various individual AOCs was to supplement the knowledge base regarding the presence of the presumed continuous shallow clay surface across the Site and how that affects migration potential in this water-bearing zone. Additional RFI work scopes supplemented knowledge of the continuity of the presumed clay by tagging the sand/clay interface at a number of locations within individual AOCs allowing horizontal delineation to be better assessed and understanding more complete. However, without penetrating deeper through the shallow clay surface, interpretation on vertical delineation of COCs below the clay could not be determined.

In order to assess the deeper clay lithology, TRC provided oversight for one deep monitoring well within the Southern Area of the Site. Based upon Wellogic records obtained from EGGLE's online database, a well installed by Consumers Energy approximately one mile northwest (upgradient) of the Site indicated a water bearing zone within the shale present at approximately 130 feet bgs. The purpose of the deep, water bearing well on-site was to vertically profile the underlying lithologic and hydrogeologic conditions beneath the Site.

Therefore, TRC oversaw the installation of a deep, double-cased monitoring well MW-22-22D was installed in the gray shale and screened at 140-150 feet bgs on December 19 through 22, 2022 by Stock Drilling (Stock), for vertical delineation purposes and targeting the next water-bearing zone below the overburden. A sonic drill rig was used to advance an outer casing to a depth of 25 feet bgs that was five feet into the underlying clay unit to isolate the upper sand rich unit from the water bearing shale. The inner borehole was drilled to a depth of 150 feet bgs. Two-inch inner diameter Schedule 40 PVC surface casing was installed, and the annular space was sealed using a cement quick grout placed using a tremie pipe. The annular seal was allowed to cure overnight prior to well development.

The monitoring well was constructed using Schedule 40 PVC threaded riser and 10 feet of factory machine-slotted threaded, 2-inch diameter screen (0.010 slot size). Clean silica medium grained sand pack was placed around the screen interval to a height of two feet above the top of the screen. Above the screen, a two-foot seal was installed with hydrated sodium bentonite. A locking, above ground protective cover was installed to approximately 4 feet above ground surface and cement apron were installed. The monitoring well was developed after installation using a pump and surge method until suspended solids were significantly reduced. All development water was collected and contained for proper disposal.

Underground Tunnels and Subsurface Utility Corridors

Multiple utility corridors and historical underground pedestrian tunnels on-site connecting former buildings were investigated. The initial focus of the site wide assessment of these former and current features was to identify and map their locations for delineation purposes. Secondly, risks associated with the presence of utility corridors (which are typically shallow, set at an average of 3- 5 feet bgs) can exacerbate impacts to soil, groundwater and/or soil gas through

migration of COCs along preferential pathways provided by the surrounding fill material of the utility line or through residual void space of the crushed tunnels.

Although it has been demonstrated that overburden within the Site is typically sand, fill material surrounding utility lines may present a preferential pathway concern. Therefore, the termination of on-site utility corridors into off-site mains within both Pinecrest Drive and 8 Mile Road were evaluated within the right-of-way of each respective roadway and along the locations of the tunnels and the paths of the underground utility corridors.

Utility corridors were evaluated during assessment of the Southern Area. These tunnels were reported to have been crushed and compacted with fill during demolition activities in 2012/2013. Specifically, during test pit evaluation and soil boring/monitoring well boring advancement in the Southern Area, subsurface investigations extended at least to the terminus depth of approximately 10 feet bgs which is the approximate depth of the tunnels.

Migration of VOCs and/or SVOCs as well as mercury vapor (likely occurring from confirmed presence of an unknown source of mercury onsite) in soil and groundwater has been identified at the Site, particularly within the Southern Area. Trichloroethylene specifically has been identified in soil gas samples collected within the eastern right-of-way of Pinecrest Drive, within a residential area. As such, identification and delineation of the location of the tunnels and utility corridors and the effect these may contribute to COCs within soil/groundwater/soil gas will also be completed as part of the site-wide AOC as well as in individual AOCs. The findings of this assessment are presented in **Section 3.10**

3.0 Results

3.1 Site Geology and Hydrogeology

3.1.1 Regional Geology

Regionally, the unconsolidated and consolidated geology beneath the Southern Area is described as:

“LAKE SAND AND GRAVEL – Yellowish-brown or pale-brown to gray, calcareous fine to coarse sand with local lenses of rounded medium gravel or pebble layers. Commonly crossbedded; lenticular bedding or tabular foreset bedding locally. Generally, well sorted, without significant silt or clay. Clast composition varies, reflecting compositions of materials transported by waves and currents. Nearshore, strand, and deltaic deposits of former glacial and postglacial lakes and present Great Lakes. Includes deposits of beach ridges, offshore bars, and spits; also includes small areas of lake silt and clay (lca), complex lake deposits (lcc), and bedrock outcrop. Locally overlain by eolian sand and silt (ed, eu), alluvium (al), peat (hp), or swamp deposits (hs). Mapped only where extensive. Thickness generally 1-10 m, locally more than 30 m.” (Quaternary Geologic Map of the Lake Erie 4 Degree by 6 Degree Quadrangle, United States and Canada; Edited and Integrated by Fullerton and Richmond, 1991).

Below the sand and clay unit, is the Antrim Shale which is a dark gray or brown to largely black, highly carbonaceous, thinly laminated shale with meager fossil content except for profuse algal spores. Large dark brown, bituminous and pyritic limestone concretions occur in the lower Antrim and are typically from 0.96 to 1.5 m in diameter. Secondary unit description from USGS Geologic Names lexicon (ref. MI016). Milstein, Randall L. (compiler), 1987, Bedrock geology of southern Michigan: Geological Survey Division, Michigan Dept. of Natural Resources, scale 1:500,000.

3.1.2 Site Geology

The Site is situated at an elevation of approximately 660 ft above mean sea level. The topographic gradient at the Site was observed to be generally slightly sloping towards the east. Precipitation is managed through infiltration and combined storm drains located on Pinecrest Street.

The soil encountered at the Site generally appeared to be one to two feet of non-native (fill) sandy gravel and clay soils underlain by approximately 15 to 20 feet of native sand underlain by a low permeability, stiff, dry clay. For additional stratigraphic information see the soil boring logs and monitoring well construction diagrams in **Appendix A**.

3.1.3 Hydrogeology

Groundwater at the Site was encountered at depths ranging from approximately 5 to 13 feet bgs during the December 2022 groundwater monitoring event and 4 to 14 ft bgs during the March 2023 groundwater monitoring event. Most of the variability in the depth of groundwater is related to Site topography. Based on water elevation data collected during the December 2022 and

March 2023 groundwater monitoring events, which included groundwater elevation measurements from Eastern Boundary monitoring wells, the general direction of shallow groundwater flow on the Site under ambient steady state conditions is generally toward the East. The groundwater contour map for the December 2022 groundwater monitoring event is presented in **Figure 4** and the groundwater contour map for the March 2023 groundwater monitoring event is presented in **Figure 5**.

3.2 Laboratory Analytical Results

Groundwater and soil analytical results were compared to applicable 2012 EGLE non-residential Michigan Part 201 cleanup criteria and screening levels. Specifically, groundwater concentrations were compared to non-residential Drinking Water Criteria (NR-DWC), Groundwater Surface water Interface Criteria (GSIC), non-residential Groundwater Contact Criteria (NR-GWCC), and non-residential Volatilization to Indoor Air Pathway (NR-VIAP) screening levels. Soil analytical results were compared to non-residential Drinking Water Protection Criteria (NR-DWPC), Groundwater Surface water Interface Protection Criteria (GSIPC), and non-residential VIAP screening levels, non-residential Groundwater Contact Protection Criteria (NR-GWCPC) and non-residential Direct Contact Criteria (NR-DCC). The VIAP screening levels were used to screen for soil vapor intrusion risk instead of the 2012 groundwater volatilization to indoor air inhalation criteria (GVIIC) and soil volatilization to indoor air inhalation criteria (SVIIC) due to site conditions (shallow groundwater) that is more appropriate for use of the VIAP. Soil and groundwater analytical laboratory reports are included as **Appendix C**.

3.3 AOC 3 – SWMU 3 – Former Burial Area

2022 Soil Results

The following are soil results for the test pits AOC3-TP01 – AOC3-TP04 and monitoring well soil borings MW-22-11 and MW-22-12 within AOC-3. No buried waste was encountered.

- Full Michigan Part 201 VOCs List + TICs: Hexachlorobutadiene was detected above GSIPC and NR-VIAP in AOC3-TP04. No VOC TICs were identified in AOC-3.
- 1,4 dioxane: Was not detected above its RL.
- Alcohols: methanol was detected in MW-22-11 and MW-22-12 above the NR-DWPC.
- Full Michigan Part 201 SVOC List + TICs: Hexachlorobenzene was detected in AOC3-TP04-S. No SVOC TICs were identified in AOC-3.
- Full Michigan Part 201 Metals List: Chromium was detected above the GSIPC at select test pit samples.
- PCBs: Were not detected above RLs.
- Michigan List 31 PFAS: Were not detected above RLs.

2022-2023 Groundwater Results

The following are groundwater results for the newly installed monitoring wells MW-22-11 and MW-22-12 that were installed upgradient and downgradient of AOC-3. Existing monitoring wells

MW-130 and MW-131 were to be sampled as part of AOC-3 but could not be located.

- Full Michigan Part 201 VOC List + TICs: VOCs were not detected above RLs in the groundwater samples collected from MW-22-11 and MW-22-12. No VOC TICs were identified in AOC-3.
- 1,4 dioxane: Was not detected, except for 1.0 microgram per liter (ug/L) in the groundwater sample collected from MW-22-12 in December 2022 (which is below the most restrictive cleanup criteria (GSIC) of 280 ug/L).
- Alcohols: Were not detected above the RL.
- Full Michigan Part 201 SVOC List + TICs: Were not detected above their respective RLs. No SVOC TICs were identified in AOC-3.
- Full Part 201 Metals List: manganese was detected in both MW-22-11 and MW-22-12 above NR-DWC in December 2022 and March 2023. Aluminum and Iron were at concentrations above the NR-DWC during the December 2022 event but were below the NR-DWC in the March 2023 event.
- PCBs: Were not detected above RLs.
- Michigan List 31 PFAS: Perfluorobutane sulfonic acid (PFBS), Perfluorohexane sulfonic acid (PFHxS), PFHxS-LN, and PFOA were detected in both MW-22-11 and MW-22-12 at concentrations below their respective NR cleanup criteria.

Refer to **Tables 2-10**, **Figures 6-7** and **Appendix C** for soil and groundwater results.

3.4 AOC 7 – PCE/TCE

2022 Soil Results

The following are soil results for monitoring well soil borings MW-22-08 and MW-22-09 within AOC-7.

- Full Michigan Part 201 VOCs List + TICs: Naphthalene at a concentration above the GSIPC and Trichlorofluoro-methane (Freon 11) at a concentration above the NR-VIAP were detected in MW-22-09 (8-10'). No PCE, no TCE or VOC TICs were identified in AOC-7 in soil.
- 1,4 dioxane: Was not detected above the RL.
- Alcohols: Methanol was detected in sample MW-22-08 (8-10') at a concentration above the NR-DWPC.
- Full Part 201 SVOC List + TICs: Fluoranthene and phenanthrene were detected in select samples at concentrations above the GSIPC and/or NR-VIAP. The SVOC TIC benzo(e)pyrene was identified in MW-22-08 (2-3'), MW-22-09 (2-4'), and MW-22-09 (8-10'), however there is no Part 201 cleanup criteria for this constituent.
- Full Part 201 Metals List: Aluminum, boron, chromium, mercury, selenium, and zinc were detected at concentrations above the NR-DWPC, GSIPC, and/or NR-VIAP (mercury) in one or more soil samples.
- PCBs: Was not detected above the RLs.
- Michigan List 31 PFAS: PFOS was detected at a concentration above the GSIPC in MW-22-09 (8-10').

- Tetraethyl Lead: Was not detected above the RL.

2022-2023 Groundwater Results

The following are groundwater results for the newly installed MW-22-08 and MW-22-09 in the southeast and northwest areas on AOC-7. MW-126 was to be sampled as part of AOC-7, however this well could not be located.

- Full Michigan Part 201 VOC List + TICs: VOCs were not detected above their respective RLs in MW-22-08 and MW-22-09. No PCE, TCE or VOC TICs were identified in AOC-7 in groundwater.
- 1,4 dioxane: Was not detected above the RL.
- Alcohols: Was not detected above the RL.
- Full Part 201 SVOC List + TICs: Were not detected above their respective RLs. No SVOC TICs were identified in AOC-7.
- Full Part 201 Metals List: aluminum, iron, and manganese were detected in the groundwater samples from MW-22-18 and MW-22-09 at concentrations above the NR-DWC in December 2022. Aluminum and Iron were both detected at concentrations above the NR-DWC during the December 2022 event but were below the NR-DWC in the March 2023 event.
- PCBs: Was not detected above the RL.
- Michigan List 31 PFAS: PFBS, Perfluorobutanoic acid (PFBA), Perfluoroheptanoic acid (PFHpA), PFHxS-BR, PFHxS-LN, Perfluorohexanoic acid (PFHxA), Perfluorooctane sulfonic acid (PFOS), PFOS-LN, PFOA, and Perfluoropentanoic acid (PFPeA) were detected, but were all at concentrations below their respective NR cleanup criteria.
- Tetraethyl Lead: Was not detected above the RL.

Refer to **Tables 2-10, Figures 6-7** and **Appendix C** for soil and groundwater results.

3.5 AOC 8 – PFOA/PFOS

AOC 8 contained historical Building D, of which the former operations occurring at this building are unknown. This former building was situated in between former Building DA, which was utilized for chemical research and former Building C, which was utilized for engine research and dynamometer, fuel testing and control testing.

2022 Soil Results

The following are soil results for monitoring well soil borings MW-22-18 and MW-22-19 within AOC-8.

- Full Michigan Part 201 VOCs List + TICs: none detected above the RL. No VOC TICs were identified in AOC-8.
- 1,4 dioxane: Was not detected above the RL.
- Alcohols: Was not detected above the RL.

- Full Part 201 SVOC List + TICs: Several SVOCs were detected but were below cleanup criteria. SVOC TIC benzo(e)pyrene was identified in MW-22-18 (2-4') and MW-22-19 (2-4'), however there is no Part 201 cleanup criteria for this constituent.
- Full Part 201 Metals List: Chromium was detected above GSIPC in MW-22-18 and MW-22-19, and selenium was detected above GSIPC in MW-22-18 (2-4').
- PCBs: Was not detected above the RL.
- Michigan List 31 PFAS: PFOS was detected in sample MW-22-19 (8-10') but is below cleanup criteria. No other PFAS were detected in soil.

2022-2023 Groundwater Results

The following are groundwater results for the newly installed MW-22-18 and MW-22-19 in the southeast and northwest areas on AOC-8 and existing wells MW-128 and MW-129. MW-132 and MW-133 that were to be sampled as part of the AOC-8 investigation, could not be located and were therefore not sampled.

- Full Michigan Part 201 VOC List + TICs: VOC tetrachloroethene was detected above NR-DWC at MW-128 for both December 2022 and March 2023 events, all other VOCs were either non detect or below cleanup criteria. VOC TICs for Ethane, 1-chloro-1-fluoro-, dichlorofluoromethane, and chlorofluoromethane were identified in AOC-7 however none of these constituents have Part 201 cleanup criteria.
- 1,4 dioxane: Was not detected above the RL.
- Alcohols: Was not detected above the RL.
- Full Michigan Part 201 SVOC List + TICs: Were not detected above the RL. No SVOC TICs were identified in AOC-8.
- Full Part 201 Metals List: aluminum, iron, and manganese were detected in both MW-22-18 and MW-22-09 above NR-DWC in December 2022. Aluminum and Iron were both detected above NR-DWC during the December 2022 event but were not confirmed in the March 2023 event. Manganese and Boron was detected in MW-128 and MW-129 above NR-DWC.
- PCBs: Were not detected above RLs.
- Michigan List 31 PFAS: PFOS was detected above NR-DWC and GSIC and PFOA were detected above NR-DWC during the December 2022 and March 2023 events in MW-128 and MW-129.

3.6 AOC 9 – Neutralization Basin/Former UST Area

The area of a former neutralization basin and former UST is located along the southeastern portion of the Southern Area.

2022 Soil Results

The following are soil results for monitoring well soil borings MW-22-13, MW-22-14, and MW-22-15 and soil borings SB-01 and SB-02 within AOC-9.

- Full Michigan Part 201 VOCs List + TICs: none detected above cleanup criteria. No VOC TICs were identified in AOC-8.

- 1,4 dioxane: not detected above cleanup criteria.
- Alcohols: Methanol was detected above NRDWPC at MW-22-13 (8-10').
- Full Michigan Part 201 SVOC List + TICs: not detected above cleanup criteria. SVOC TICs benzo(e)pyrene was identified in SB-02 (2-4') however there is no cleanup criteria for this constituent.
- Full Michigan Part 201 Metals List: Chromium and were detected above GSIPC in SB-02. Mercury was detected above GSIPC and NR-VIAP in SB-02.
- PCBs: Not detected above RLs.
- Michigan List 31 PFAS: not detected above cleanup criteria.

2022-2023 Groundwater Results

The following are groundwater results for the newly installed MW-22-13, MW-22-14, and MW-22-15 within the northern, eastern, southeastern and western portions of the AOC to evaluate soil and groundwater conditions in a cross-gradient direction.

- Full Michigan Part 201 VOC List + TICs: none detected above cleanup criteria. VOC TICs for Ethane, 1-chloro-1-fluoro-, dichlorofluoromethane, and/or chlorofluoromethane were identified in MW-22-13 and/or MW-22-14 however this is no cleanup criteria for these constituents.
- 1,4 dioxane: Not detected above RLs.
- Alcohols: Not detected above RLs.
- Full Part 201 SVOC List + TICs: none detected above RLs. No SVOC TICs were identified in AOC-9.
- Full Part 201 Metals List: copper was detected in MW-22-14 above GSIC in March 2023. Manganese was detected in MW-22-13, MW-22-14 and MW-22-15 above NR-DWC during the both the December 2022 event and the March 2023 event.
- PCBs: Not detected above RLs.
- Michigan List 31 PFAS: PFOS was detected above NR-DWC and GSIC in MW-22-13 and PFOA was detected above NR-DWC in MW-22-13, MW-22-14 and MW-22-15 during the December 2022 and March 2023 events.

Refer to **Tables 2-10, Figures 6-7** and **Appendix C** for soil and groundwater results.

3.7 AOC 10 – Former Heating Oil UST/EMI Interference – GPR Anomaly

Electromagnetic induction conducted indicated the presence of deep and shallow voids within the subsurface of this area, which is located within the southern-central portion of the Southern Area. Furthermore, a GPR survey conducted within this area indicated an anomaly within the subsurface. According to historical documentation, a former heating oil UST was located within this area.

GPR Anomaly

No buried waste or USTs were encountered during the subsurface work in AOC-10.

2022 Soil Results

The following are soil results for the test pits AOC10-TP01 – AOC10-TP02 and monitoring wells MW-22-16 and MW-22-17 within AOC-10. Full Michigan Part 201 VOCs List + TICs: none detected above cleanup criteria. VOC TIC 4,7-Dichloroquinoline was identified in AOC10-TP02-N however there is no cleanup criteria for this constituent.

- 1,4 dioxane: Not detected above RLs.
- Alcohols: Not detected above RLs.
- Full Michigan Part 201 SVOC List + TICs: SVOCs fluoranthene and phenanthrene were detected above GSIPC in AOC10-TP01 and MW-22-17 (8-10'). The SVOC TIC Benzo(e)pyrene was detected in several samples and 11H-Benzo[a]fluorene was identified in AOC10 at MW-22-17 (8-10') however there is no cleanup criteria for these constituents.
- Full Michigan Part 201 Metals List: Chromium was detected above GSIPC in AOC10-TP01-N, AOC10-TP01-S, AOC10-TP02-B, MW-22-16 and MW-22-17 and mercury was detected above GSIPC at AOC10-TP01-N, AOC10-TP01-S, AOC10-TP02-B and AOC10-TP02-W and NR-VIAP at AOC10-TP02-B and AOC10-TP02-W.
- PCBs: None detected above RLs.
- Michigan List 31 PFAS: PFOS was detected above GSIPC at AOC10-TP01 and MW-22-17.

2022-2023 Groundwater Results

The following are groundwater results for the newly installed MW-22-16 and MW-22-17 upgradient and downgradient of AOC-10. MW-127 that was to be sampled as part of the AOC-10 investigation, could not be located and was therefore not sampled.

- Full Part 201 VOC List + TICs: VOCs were not detected in MW-22-11 and MW-22-12. No VOC TICs were identified in AOC-10.
- 1,4 dioxane: Not detected above the RL.
- Alcohols: Not detected above the RL.
- Full Part 201 SVOC List + TICs: none detected. No SVOC TICs were identified in AOC-10.
- Full Part 201 Metals List: manganese was detected in both MW-22-16 and MW-22-17 above NR-DWC in December 2022 and March 2023.
- PCBs: Not detected above the RL.
- Michigan List 31 PFAS: PFBS, Perfluoroheptanoic acid (PFHpA), Perfluorohexane sulfonic acid (PFHxS), PFHxS-LN, Perfluorohexanoic acid (PFHxA), Perfluoropentanoic acid (PFPeA) and were detected, but below cleanup criteria. PFOA was detected above NR-DWC in both MW-22-16 and MW-22-17.

Refer to **Tables 2-10, Figures 6-7** and **Appendix C** for soil and groundwater results.

3.8 AOC 11 – Former UST Area/EMI Interference

Electromagnetic induction conducted indicated the presence of deep and shallow voids within the subsurface of this area, which is located within the southern-central portion of the Southern AOC Area. According to historical documentation, USTs were formerly located within this area.

Former UST Area/EMI Interference

During the investigation in AOC-11, the EMI anomalies were confirmed to be concrete pads and steel tie downs at around 8.4 feet bgs in AOC11-TP02 and 9.3 feet bgs in AOC11-TP01. These concrete pads are likely UST Deadman for the former USTs. No USTs or buried waste were encountered.

2022 Soil Results

The following are soil results for the test pits AOC11-TP01 – AOC11-TP04 and monitoring well soil borings MW-22-07 and MW-22-11 within AOC-11.

- Full Part 201 VOCs List + TICs: none detected in the test pits and none detected above cleanup criteria in MW-22-07 and MW-22-10. VOC TIC hexadecane was identified in AOC-11 however, there is no cleanup criteria for this constituent.
- 1,4 dioxane: none detected above cleanup criteria.
- Alcohols: none detected above cleanup criteria.
- Full Part 201 SVOC List + TICs: SVOC benzo(a)pyrene was detected in test pit samples AOC11-TP03-E and AOC11-TP04-W above NR-DCC, and fluoranthene and/or phenanthrene were detected above GSIPC in AOC11-TP01-E, AOC11-TP01-N, AOC11-TP02-W, AOC11-TP03-E and AOC11-TP04-W. SVOC TIC benzo(e)pyrene, 11H-Benzo[a]fluorene, and 1,2:3,4-dibenzpyrene were identified in several samples in AOC-11, however these constituents do not have cleanup criteria.
- Full Part 201 Metals List: Chromium was detected above GSIPC at AOC11-TP02-W and mercury was detected above GSIPC at AOC11-TP02-S, AOC11-TP03-W, AOC11-TP04-N, AOC11-TP04-S and AOC11-TP04-W and NR-VIAP at AOC11-TP02-S and AOC11-TP03-W.
- PCBs: none detected above the RLs.
- Michigan List 31 PFAS: PFOS was detected above GSIPC at AOC11-TP01, AOC11-TP04, and MW-22-07.
- Tetraethyl Lead: None detected above the RLs.

2022-2023 Groundwater Results

The following are groundwater results for the newly installed MW-22-07 and MW-22-10 downgradient of AOC-11. MW-124 and MW-125 to be sampled as part of the AOC-11 investigation, could not be located and were therefore not sampled.

- Full Part 201 VOC List + TICs: VOCs were not detected in MW-22-07 and MW-22-10. No VOC TICs were identified in AOC-10.
- 1,4 dioxane: none detected above RLs.
- Alcohols: none detected above RLs.
- Full Part 201 SVOC List + TICs: none detected. No SVOC TICs were identified in AOC-11
- Full Part 201 Metals List: aluminum was detected above NR-DWC in MW-22-10 during the December 2022 event, it was not conformed during the March 2023 event. Manganese was detected in both MW-22-07, March 2023 only, and MW-22-10, both December 2022 and March 2023 above NR-DWC.

- PCBs: none detected above RLs.
- Michigan List 31 PFAS: PFBS, Perfluorobutanoic acid (PFBA), Perfluoroheptanoic acid (PFHpA), Perfluorohexane sulfonic acid (PFHxS), PFHxS-LN, Perfluorohexanoic acid (PFHxA), Perfluorooctane sulfonic acid (PFOS), and Perfluoropentanoic acid (PFPeA) and were detected, but below cleanup criteria. PFOA was detected above NR-DWC.
- Tetraethyl Lead: not detected above RLs.

As no VOC exceedances were observed above cleanup criteria, additional soil gas point installation and sampling was not completed during this assessment per the RFI.

Refer to **Tables 2-10**, **Figures 6-7** and **Appendix C** for soil and groundwater results.

3.9 AOC 12 – EMI Interference – GPR Anomaly

Electromagnetic induction conducted indicated the presence of a large deep void within the subsurface of this area, which is located within the southern portion of the Southern AOC Area. Furthermore, a GPR survey conducted within this area indicated an anomaly within the subsurface.

EMI Interference – GPR Anomaly

Buried fill material, concrete foundation remnants and bricks were encountered at about 10 feet bgs in AOC12-TP01. No buried hazardous substance waste was encountered.

2022 Soil Results

The following are soil results for the test pits AOC12-TP01 – AOC12-TP03 and monitoring well soil borings MW-22-20 and MW-22-21 within AOC-12. Full Michigan Part 201 VOCs List + TICs: none detected above cleanup criteria in the test pits or monitoring wells. No VOC TICs were identified in AOC12.

- 1,4 dioxane: was detected but below cleanup criteria in MW-22-21 (2-4').
- Alcohols: methanol was detected but below cleanup criteria in AOC12-TP02 and AOC12-TP03.
- Full Michigan Part 201 SVOC List + TICs: SVOC benzo(a)pyrene was detected in test pit samples above NR-DCC, and fluoranthene, naphthalene and/or phenanthrene were detected above GSIPC in in several test pit and MW-22-20 and MW-22-21 samples. Naphthalene and phenanthrene were detected above NR-VIAP in test pit samples. SVOC TIC benzo(e)pyrene and 1,2:3,4-dibenzpyrene were identified in several samples in AOC-12 however there is no cleanup criteria for this constituent.
- Full Michigan Part 201 Metals List: Aluminum, boron, and manganese samples were detected above NR-DWPC, chromium, manganese and mercury were detected above GSIPC, and mercury samples was detected above NR-VIAP.
- PCBs: PCBs were detected in sample AOC12-TP01-B but were below cleanup criteria.
- Michigan List 31 PFAS: PFOS was detected above GSIPC at AOC12-TP01, AOC12-TP02, and MW-22-21.

2022-2023 Groundwater Results

The following are groundwater results for the newly installed MW-22-20 and MW-22-21 in AOC-12 and existing monitoring wells MW-101, MW-102, and MW-103 near the south edge of AOC-12.

- Full Michigan Part 201 VOC List + TICs: VOC hexachlorobutadiene was detected above GSIC in MW-103 during the March 2023 event, all other VOCs were not detected above RLs. No VOC TICs were identified in AOC-12.
- 1,4 dioxane: not detected.
- Alcohols: none detected above RLs.
- Full Part 201 SVOC List + TICs: none detected. No SVOC TICs were identified in AOC-12
- Full Part 201 Metals List: aluminum was detected above NR-DWC in MW-101 during the March 2023 event and manganese was detected above NR-DWC in MW-103 in March 2023, and MW-22-2 and MW-22-21 for both December 2022 and March 2023.
- PCBs: none detected above RLs.
- Michigan List 31 PFAS: 6:2 Fluorotelomer sulfonic acid (6:2 FTS), PFBS, Perfluorobutanoic acid (PFBA), Perfluoroheptanoic acid (PFHpA), Perfluorohexane sulfonic acid (PFHxS), PFHxS-BR, PFHxS-LN, Perfluorohexanoic acid (PFHxA), PFOS-BR, PFOS-LN, Perfluoropentane sulfonic acid (PFPeS), and Perfluoropentanoic acid (PFPeA) and were detected, but below cleanup criteria. Perfluorooctane sulfonic acid (PFOS) was detected above NR-DWC and GSIC and PFOA was detected above NR-DWC in MW-103.

Refer to **Tables 2-10, Figures 6-7** and **Appendix C** for soil and groundwater results.

3.10 Site Wide Investigation

The purpose of the Site Wide Investigation is to create a holistic, site-wide approach to the investigation of the Site. Activities performed during the Site Wide Investigation include 1) the vertical delineation of overburden to provide a better understanding of the overall deep lithology (greater than the current maximum explored depth of 25 feet bgs) by completing the installation of MW-22-22D; and 2) assess potential preferential pathways created by utility corridors and/or known underground tunnels on the Site by completing a GPR, electromagnetic pipe locator, traceable rodder and EMI survey along the southern and eastern property boundaries, and in the interior of the Site with focus on the storm sewer on May 5, 2023. Select utilities were also pot holed to determine the depth and backfill.

2022-2023 Groundwater Results

The following are groundwater results for the newly installed deep monitoring well MW-22-22D located between AOC-8 and AOC-9.

- Full Michigan Part 201 VOC List + TICs: VOC benzene was detected above NR-DWC during both the December 2022 and the March 2023 events, toluene was detected but below cleanup criteria, all other VOCs were not detected above their applicable RLs. Several VOC TICs including propane, butane, 1-pentene, cyclopropane, methyl-cyclopentane were identified in MW-22-22D. The nature of the VOC TIC contaminants encountered in this well are indicative of what is typically found in wells installed within the shale. Hydrocarbons commonly referred to as

Bitumens are common in shale aquifers and have been found in the Antrim shale throughout the State of Michigan (*Chemical Composition of the Antrim Shale in the Michigan Basin*, Leddy, Sandel, Swartz, Kenny, Gulick and Khadem, August 1980). This may explain why Consumers Energy has an exploratory well installed within the Shale within one mile of the Site. These contaminants (benzene, toluene and the identified TICs) in MW-22-22D are not found on the Site property and are separated from the Site contaminants by a double cased monitoring well and 105 feet of very low permeability clay.

- 1,4 dioxane: Was not detected above the RL.
- Alcohols: Was not detected above the RL.
- Full Michigan Part 201 SVOC List + TICs: Were not detected above their respective RLs. No SVOC TICs were identified in MW-22-22D.
- Full Michigan Part 201 Metals List: aluminum and iron were detected in the December 2022 event, and boron, manganese and sodium in the December 2022 and March 2023 event were detected at concentrations above their respective NR-DWC in MW-22-22D. Barium, selenium, and sodium were detected at concentrations above their respective GSIC in December 2022 and March 2023 events.
- PCBs: Was not detected above the RLs.
- Michigan List 31 PFAS: none detected.

Refer to **Tables 2-10, Figures 6-7** and **Appendix C** for groundwater results.

Utility Corridor Assessment Results

The utility GPR, electromagnetic pipe locator, traceable rodder and EMI survey conducted along the southern and eastern property boundaries and select locations within the Site including the storm sewer was completed May 5, 2023, by GPRS. The survey indicated no new utilities or anomalies along these locations that may be aiding in off-site migration. It was confirmed that the water main along the south side of the Site and the gas main utility on the east side are shallow in the sub surface at depths of approximately 5.2-6.2 feet bgs and approximately 2.1-3.5 feet bgs respectively and therefore are likely are not aid in off-site migration of contaminants via groundwater and soil vapor due to their shallow depth. The storm sewer was noted to extend below the water table in the interior of the Site, starting at a depth of approximately 5.5 feet bgs in the west near AOC-11 to 14 feet bgs to the east of AOC-09. One manhole north of AOC-9 and one manhole within AOC-10 were observed by GPRS to be filled with sand. An additional assessment of the storm sewer on-site and off-site is planned to determine the potential migration pathway as discussed in Section 5.0. Future use of the storm sewer or potential abandonment of the storm sewer will be reviewed.

The findings of the utility locate, and EMI survey can be found on **Figure 3**.

4.0 Summary and Conclusions

4.1 AOC 3 – SWMU 3 – Former Burial Area

Former waste burial areas in AOC-3 were not identified during the test pit excavations and monitoring well installation. Based on the results of soil and groundwater analytical data obtained during the December 2022 and March 2023 events, select soil constituents at test pits AOC3-TP01 through AOC3-TP03 and soil borings for MW-22-11 and MW-22-12 and select groundwater constituents for MW-22-11 and MW-22-12 are present at concentrations exceeding one or more applicable NR Michigan Part 201 cleanup criteria in AOC-3. Those include the following:

4.1.1 Soil

- Total Metals:
 - Chromium in some samples had concentrations that exceeded the Michigan Part 201 generic GSIPC at AOC3-TP01, AOC3-TP02, AOC3-TP03 and to AOC3-TP04 based on the potential for hexavalent chromium (chromium VI) in soil. These potential impacts are likely naturally occurring in soil as all the concentrations detected are below the Part 201 default background criteria for total chromium, however speciated analysis for hexavalent chromium (to likely demonstrate hexavalent chromium is not present) is recommended to confirm that the Part 201 default background criteria apply to this AOC. Chromium concentrations within groundwater at down gradient wells MW-22-11, MW-106 and MW-107 is not observed above the chromium GSI cleanup criteria, therefore potential migration of chromium to the nearest GSI (combined storm sewer in Pinecrest Dr.) is not occurring, and therefore this pathway is incomplete.
 - Hexachloro-butadiene had concentrations that exceeded the Michigan Part 201 generic GSIPC and NR-VIAP at in some soil samples at AOC3-TP04. These impacts are isolated to the shallow sidewalls (5 ft bgs) and do not extend to the bottom. Hexachloro-butadiene in groundwater within down gradient wells MW-22-11, MW-106 and MW-107 is not observed above the GSI or NR-VIAP, therefore Hexachloro-butadiene does not appear to be migrating beyond AOC-3. The VIAP is also incomplete at this time due to no buildings existing at the Site. Should buildings be built near or at AOC-3 in the future, institutional controls will require soil vapor assessment and/or vapor intrusion evaluation and if merited vapor mitigation be completed prior to/or coincident with constructing a building intended for regular human occupation.
- Alcohols:
 - Methanol concentrations exceeded the Michigan Part 201 NR-DWPC at MW-22-11 and MW-22-12. Methanol is not observed in downgradient monitoring wells MW-106 and MW-107, therefore methanol does not appear to be migrating beyond AOC-3. The drinking water pathway is also incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.

- SVOCs:
 - Hexachlorobenzene concentrations exceeded the Michigan Part 201 generic GSIPC and NR-VIAP at AOC3-TP04. Hexachlorobenzene is not observed in downgradient monitoring well MW-22-11, therefore hexachlorobenzene does not appear to be migrating beyond AOC-3. The VIAP is also incomplete at this time due to no buildings existing at the Site. Should buildings be built near or at AOC-3 in the future, institutional controls will require soil vapor assessment/or vapor intrusion evaluation and if merited vapor mitigation be completed prior to/or coincident with constructing a building intended for regular human occupation.

4.1.2 Groundwater

- Total Metals:
 - Aluminum concentrations exceeded the Michigan Part 201 generic NR-DWC at MW-22-11 and MW-22-12 in December 2022. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
 - Iron concentrations exceeded the Michigan Part 201 generic NR-DWC at MW-12 in December 2022. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
 - Manganese concentrations exceeded the Michigan Part 201 generic NR-DWC at MW-11 and MW-12 in both December 2022 and March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
- VOCs:
 - Previous groundwater impacts of 1,2-dichlorobenzene (SB/TMW-8 and SB/TMW-8R) and TCE (MW-9 and MW-10) above Part 201 clean up criteria observed in 2012 and 2015/2016 were not observed in new monitoring wells MW-22-12 (upgradient of AOC-3) and MW-22-11 (downgradient of AOC-3). Previous impacts of 1,2-dichlorobenzene above Part 201 clean up criteria is delineated by downgradient monitoring wells MW-106, MW-107 and MW-108. TCE above Part 201 criteria is observed in downgradient monitoring well MW-107. It should be noted that no soil impacts of TCE above RLs were observed in AOC-3.

4.1.3 Next Steps

- MW-130 and MW-131 that were to be sampled as part of the AOC-3 investigation, could not be located and are presumed destroyed. Prior impacts in these monitoring wells consisted of various metals and PFAS exceeding NR-DWC and GSIC. Given off-site migration is being monitored by various wells in AOC-3 and along Pinecrest, it is not recommended these wells be replaced at this time. These wells will be attempted to be located as part of the next steps work plan discussed in Section 5.0, and if located, will be properly abandoned.
- Two hand auger borings are planned to be completed in AOC3-TP02 and to AOC3-TP04 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare total chromium data to the statewide background levels.

- Given buried hazardous substance waste was not encountered in AOC-3 during subsurface investigations, the pathways are incomplete for soil impacts and the soil impacts are not migrating to groundwater, AOC-3 should be considered completely assessed with no additional assessment necessary except for what is discussed above.

4.2 AOC 7 – PCE/TCE

PCE and TCE were not identified in AOC-7. Based on the results of soil and groundwater analytical data obtained during the December 2022 and March 2023 events, select soil constituents at soil borings for MW-22-08 and MW-22-09 and select groundwater constituents for MW-22-08 and MW-22-09 are present at concentrations exceeding one or more applicable Michigan Part 201 cleanup criteria in AOC-7. Those include the following:

Soil

- Total Metals:
 - Aluminum exceeded Michigan Part 201 generic NR-DWPC at MW-22-09. These soil impacts are delineated below Part 201 clean up criteria by soil samples collected from MW-22-08. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
 - Boron exceeded Michigan Part 201 generic NR-DWPC at MW-22-09. These soil impacts are delineated below Part 201 cleanup criteria by soil samples collected from MW-22-08. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
 - Chromium exceeded Michigan Part 201 generic GSIPC at MW-22-08 and MW-22-09 based on the potential for chromium VI in soil. These potential impacts are likely naturally occurring in soil as all the concentrations detected are below the Part 201 default background criteria for total chromium, however speciated analysis for hexavalent chromium (to likely demonstrate hexavalent chromium is not present) is recommended to confirm that the Part 201 default background criteria apply to this AOC. The GSI may be a potential pathway due to a nearby storm sewer and the occurrence of deeper impacts of chromium near the water table. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the publicly owned treatment works (POTW) prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area. It also should be noted that chromium was not encountered above Part 201 cleanup criteria in groundwater at MW-22-08 and MW-22-09 which indicates the soil impacts observed are not migrating in groundwater.
 - Mercury exceeded Michigan Part 201 generic GSIPC and NR-VIAP at MW-22-08 and MW-22-09 however these impacts are delineated to below Part 201 clean up criteria by soil samples collected at MW-22-18 and MW-22-19 and are not observed to be migrating to groundwater in MW-22-08 and MW-22-09. The GSI may be a potential pathway due to a nearby storm sewer and the occurrence of deeper impacts of mercury near the water table. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area. The VIAP is incomplete at this time due to no buildings existing at the Site. Should buildings be built near or at AOC-7 in the future,

institutional controls will require soil vapor assessment and or protective measures be completed prior to building or at the time of construction.

- Selenium exceeded Michigan Part 201 generic GSIPC at MW-22-09 but is delineated to below Part 201 clean up criteria by soil samples collected at MW-22-08 are not observed to be migrating to groundwater in MW-22-08 and MW-22-09. The GSI may be a potential pathway due to a nearby storm sewer and the occurrence of deeper impacts of selenium near the water table. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.
- Zinc exceeded Michigan Part 201 generic GSIPC at MW-22-09 but is delineated to below Part 201 clean up criteria by soil samples collected at MW-22-08 are not observed to be migrating to groundwater in MW-22-08 and MW-22-09. The GSI may be a potential pathway due to a nearby storm sewer and the occurrence of deeper impacts of zinc near the water table. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.
- VOCs:
 - Naphthalene exceeded Michigan Part 201 generic GSIPC at MW-22-09 but is delineated to below Part 201 clean up criteria by soil samples collected at MW-22-08 are not observed to be migrating to groundwater in MW-22-08 and MW-22-09. The GSI may be a potential pathway due to a nearby storm sewer and the occurrence of deeper impacts of naphthalene near the water table. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.
 - Trichlorofluoro-methane (Freon 11) exceeded Michigan Part 201 NR-VIAP at MW-22-09 but is delineated to below Part 201 clean up criteria by soil samples collected at MW-22-08 are not observed to be migrating to groundwater in MW-22-08 and MW-22-09. The VIAP is incomplete at this time due to no buildings existing at the Site. Should buildings be built near or at AOC-7 in the future, institutional controls will require soil vapor assessment and or protective measures be completed prior to building or at the time of construction.
- Alcohols:
 - Methanol exceeded Michigan Part 201 generic NR-DWPC at MW-22-08 however these impacts are delineated to below Part 201 clean up criteria by soil samples collected at MW-22-18 and MW-22-19 and are not observed to be migrating to groundwater in MW-22-08 and MW-22-09. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
- SVOCs:
 - Fluoranthene exceeded Michigan Part 201 generic GSIPC at MW-22-09 but is delineated to below Part 201 clean up criteria by soil samples collected at MW-22-08 are not observed to be migrating to groundwater in MW-22-08 and MW-22-09. The GSI may be a potential pathway due to a nearby storm sewer and the occurrence of deeper

impacts of fluoranthene near the water table. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.

- Phenanthrene exceeded Michigan Part 201 generic GSIPC at MW-22-08 and MW-22-09 but is delineated to below Part 201 clean up criteria by soil samples collected at MW-22-18 and MW-22-19 are not observed to be migrating to groundwater in MW-22-08 and MW-22-09. The GSI may be a potential pathway due to a nearby storm sewer and the occurrence of deeper impacts of phenanthrene near the water table. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.

- PFAS:

- PFOS exceeded Michigan Part 201 generic GSIPC at MW-22-09 but is delineated to below Part 201 clean up criteria by soil samples collected at MW-22-08 are not observed to be migrating to groundwater in MW-22-08 and MW-22-09. The GSI may be a potential pathway due to a nearby storm sewer and the occurrence of deeper impacts of PFOS near the water table. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.

Groundwater

- Total Metals:

- Aluminum exceeded Michigan Part 201 generic NR-DWC at MW-22-08 and MW-22-09 in December 2022 but was not confirmed in March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
- Iron exceeded Michigan Part 201 generic NR-DWC at MW-22-08 and MW-22-09 in December 2022 but was not confirmed in March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
- Manganese exceeded Michigan Part 201 generic NR-DWC at MW-22-08 in December 2022 and MW-09 in both December 2022 and March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
- Vanadium was previously detected above Part 201 cleanup criteria in MW-126. The vanadium impacts are delineated below Part 201 clean up criteria by the new monitoring wells installed upgradient (MW-22-09) and downgradient (MW-22-08) of AOC-7.

- VOCs:

- PCE at SB/TMW-16, SB/TMW-18 and MW-126 and TCE at MW-126 were previously detected above Part 201 cleanup criteria. These PCE and TCE impacts are delineated below Part 201 clean up criteria by the new monitoring wells installed upgradient (MW-22-09) and downgradient (MW-22-08) of AOC-7.

4.2.1 Next Steps

- MW-126 that was to be sampled as part of the AOC-7 investigation, could not be located and is presumed destroyed. Prior impacts in this well included PCE and various metals. Therefore, it is recommended this well be replaced.
- Two hand auger borings are planned to be completed at MW-22-08 and MW-22-09 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare the total chromium data to the statewide background levels.
- Given buried hazardous substance waste was not encountered in AOC-7 during subsurface investigations, the soil impacts are delineated to AOC-7 and the soil impacts are not migrating to groundwater AOC-7 should be considered completely assessed with no additional assessment necessary except for what is discussed above. The storm sewer in this AOC will be further assessed as discussed in Section 5.0.

4.3 AOC 8 – PFOA/PFOS

PFOA and PFOS were identified in AOC-8. Based on the results of soil and groundwater analytical data obtained during the December 2022 and March 2023 events, select soil constituents at soil borings for MW-22-18 and MW-22-19 and select groundwater constituents for MW-22-18, MW-22-19, MW-128, and MW-129 are present at concentrations exceeding one or more applicable Michigan Part 201 cleanup criteria in AOC-8. Those include the following:

Soil

- Total Metals:
 - Chromium exceeded Michigan Part 201 generic GSIPC at MW-22-18 and MW-22-19 based on the potential for chromium VI in soil. These potential impacts are likely naturally occurring in soil as all the concentrations detected are below the Part 201 default background criteria for total chromium, however speciated analysis for hexavalent chromium (to likely demonstrate hexavalent chromium is not present) is recommended to confirm that the Part 201 default background criteria apply to this AOC. The GSI may be a potential pathway due to a nearby storm sewer and the occurrence of deeper impacts of chromium near the water table. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the publicly owned treatment works (POTW) prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area. Chromium in groundwater is not observed in nearby MW-22-18, MW-22-19, MW-128 and MW-129.
 - Selenium exceeded Michigan Part 201 generic GSIPC at MW-22-18 but is delineated to below Part 201 cleanup criteria by soil samples collected from MW-22-13 and MW-22-14. The selenium impacts are shallow (2-4 ft bgs) and are not likely to migrate in groundwater. The GSI may be a potential pathway due to a nearby storm sewer and the occurrence. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the publicly owned treatment works (POTW) prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area. Selenium in groundwater is not observed in nearby MW-22-18, MW-22-19, MW-128 and MW-129.

Groundwater

■ Total Metals:

- Aluminum exceeded Michigan Part 201 generic NR-DWC at MW-22-18 and MW-22-19 in December 2022 but was not confirmed in March 2023. These impacts are also delineated by downgradient MW-22-13 and MW-22-14. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
- Boron exceeded Michigan Part 201 generic NR-DWC at MW-128 and MW-129 in both December 2022 and March 2023 events but is delineated below Part 201 cleanup criteria by downgradient MW-22-18 and MW-22-19. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
- Iron exceeded Michigan Part 201 generic NR-DWC at MW-22-18 and MW-22-19 in December 2022 but not confirmed in March 2023. These impacts are delineated to below Part 201 cleanup criteria at downgradient monitoring wells MW-22-13 and MW-22-14. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
- Manganese exceeded Michigan Part 201 generic NR-DWC at MW-128, MW-129, MW-22-18, and MW-22-19 in both December 2022 and March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.

■ VOCs:

- PCE exceeded Michigan Part 201 generic NR-DWC at MW-128 in both December 2022 and March 2023. These impacts are delineated to below Part 201 cleanup criteria at downgradient monitoring wells MW-22-13 and MW-22-14. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.

■ PFAS:

- PFOS exceeded Michigan Part 201 generic NR-DWC and GSIC at MW-128, MW-129, and MW-22-19 in both December 2022 and March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls. The GSI may be a potential pathway due to a nearby storm sewer. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the publicly owned treatment works (POTW) prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.
- PFOA exceeded Michigan Part 201 generic NR-DWC at MW-128, MW-129, MW-22-18, and MW-22-19 in both December 2022 and March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls. There is not a storm sewer located near AOC-8 and the Site storm sewer (while not located near AOC-8) flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge. Additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.

4.3.1 Next Steps

- Two hand auger borings are planned to be completed at MW-22-18 and MW-22-19 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare the total chromium data to the statewide background levels.
- Given buried hazardous substance waste was not encountered in AOC-8 during subsurface investigations, the soil impacts are delineated to AOC-8 and the soil impacts are not migrating to groundwater AOC-8 should be considered completely assessed with no additional assessment necessary except for what is discussed above. The storm sewer in this AOC will be further assessed as part of a site wide investigation.

4.4 AOC 9 – Neutralization Basin/Former UST Area

Based on the results of soil and groundwater analytical data obtained during the December 2022 and March 2023 events, select soil constituents at soil borings for MW-22-13, MW-22-14, MW-22-15, SB-01 and SB-02 and select groundwater constituents for MW-22-13, MW-22-14, and MW-22-15 are present at concentrations exceeding one or more applicable Michigan Part 201 cleanup criteria in AOC-9. Those include the following:

Soil

- Total Metals:
 - Chromium exceeded Michigan Part 201 generic GSIPC at SB-02 based on the potential for chromium VI in soil. These potential impacts are likely naturally occurring in soil as all the concentrations detected are below the Part 201 default background criteria for total chromium, however speciated analysis for hexavalent chromium (to likely demonstrate hexavalent chromium is not present) is recommended to confirm that the Part 201 default background criteria apply to this AOC. However, given the chromium detection is shallow (2-4 ft bgs), migration to the nearby storm sewer is not likely. Chromium is not observed in groundwater above Part 201 cleanup criteria at this AOC.
 - Mercury exceeded Michigan Part 201 generic GSIPC and NR-VIAP at SB-02. However, given the mercury impact is shallow (2-4 ft bgs), migration to the nearby storm sewer is not likely. Mercury is not observed in groundwater above Part 201 cleanup criteria at this AOC. The VIAP is incomplete at this time due to no buildings existing at the Site. Should buildings be built near or at AOC-9 in the future, institutional controls will require soil vapor assessment and or protective measures be completed prior to building or at the time of construction.
- Alcohols:
 - Methanol exceeded Michigan Part 201 generic NR-DWPC at MW-22-13 however methanol is not observed to be migrating to groundwater in MW-22-13. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls. Methanol is not observed above Part 201 cleanup criteria in downgradient MW-121.

Groundwater

- Total Metals:

- Copper exceeded Michigan Part 201 generic GSIC at MW-22-14 in March 2023. The GSI may be a potential pathway due to a nearby storm sewer. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.
- Manganese exceeded Michigan Part 201 generic NR-DWC at MW-22-13, MW-22-14, and MW-22-15 in both December 2022 and March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
- PFAS:
 - PFOS exceeded Michigan Part 201 generic NR-DWC and GSIC at MW-22-13 in both December 2022 and March 2023. GSI may be a potential pathway due to a nearby storm sewer. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.
 - PFOA exceeded Michigan Part 201 generic NR-DWC at MW-22-13, MW-22-14, and MW-22-15 in both December 2022 and March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.

4.4.1 Next Steps

- One hand auger boring is planned to be completed at SB-02 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare the total chromium data to the statewide background levels.
- Installation of two monitoring wells east of AOC-9, one south of the storm sewer and one directly east of the neutralization basin. The wells will be installed to the base of the sand/surface of the clay unit.
- Although hazardous substance buried waste or USTs were not encountered in AOC-9 during subsurface investigations, test pitting was not completed in the area of the anomaly. It is recommended one test pit be completed in the area of the anomaly to confirm the status of any potential buried USTs. The storm sewer in this AOC will be further assessed as part of a site wide investigation.

4.5 AOC 10 – Former Heating Oil UST/EMI Interference – GPR Anomaly

No evidence of a former UST or buried anomaly area were found during test pit excavation and monitoring well installation in AOC-10. Only native sand was encountered during the assessment work. Based on the results of soil and groundwater analytical data obtained during the December 2022 and March 2023 events, select soil constituents at test pits AOC10-TP01 and AOC10-TP02 and soil borings for MW-22-16 and MW-22-17 and select groundwater constituents for MW-22-16 and MW-22-17 are present at concentrations exceeding one or more applicable Michigan Part 201 cleanup criteria in AOC-10. Those include the following:

Soil

- Total Metals:

- Chromium exceeded Michigan Part 201 generic GSIPC at AOC10-TP01, AOC10-TP02, MW-22-16, and MW-22-17 based on the potential for chromium VI in soil. These potential impacts are likely naturally occurring in soil as all the concentrations detected are below the Part 201 default background criteria for total chromium, however speciated analysis for hexavalent chromium (to likely demonstrate hexavalent chromium is not present) is recommended to confirm that the Part 201 default background criteria apply to this AOC. The GSI may be a potential pathway due to a nearby storm sewer. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.
- Mercury exceeded Michigan Part 201 generic GSIPC at AOC10-TP01 and AOC10-TP02 and NR-VIAP at AOC10-TP02. However, these soil impacts are not migrating in groundwater. The GSI may be a potential pathway due to a nearby storm sewer. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area. The VIAP is incomplete at this time due to no buildings existing at the Site. Should buildings be built near or at AOC-9 in the future, institutional controls will require soil vapor assessment and or protective measures be completed prior to building or at the time of construction.

- SVOCs:

- Fluoranthene exceeded Michigan Part 201 generic GSIPC at AOC10-TP01 and MW-22-17. However, these soil impacts are not migrating to groundwater. The GSI may be a potential pathway due to a nearby storm sewer. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.
- Phenanthrene exceeded Michigan Part 201 generic GSIPC at AOC10-TP01 and MW-22-17. However, these soil impacts are not migrating to groundwater. The GSI may be a potential pathway due to a nearby storm sewer. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.

- PFAS:

- PFOS exceeded Michigan Part 201 generic GSIPC at AOC10-TP01 and MW-22-17. The GSI may be a potential pathway due to a nearby storm sewer. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.

Groundwater

- Total Metals:
 - Manganese exceeded Michigan Part 201 generic NR-DWC at MW-22-16, and MW-22-17 in both December 2022 and March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
- PFAS:
 - PFOA exceeded Michigan Part 201 generic NR-DWC at MW-22-17 in December 2022 and at MW-22-16 in March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.

4.5.1 Next Steps

- MW-127 that was to be sampled as part of the AOC-10 investigation, could not be located and is presumed destroyed. Prior impacts in this well included PCE and various metals. Therefore, it is recommended this well be replaced.
- Two hand auger borings are planned to be completed at AOC10-TP01, AOC10-TP02 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare the total chromium data to the statewide background levels.
- Given buried hazardous substance waste or USTs were not encountered in AOC-10 during subsurface investigations and the soil impacts are not migrating to groundwater AOC-10 should be considered completely assessed with no additional assessment necessary except for what is discussed above. The storm sewer in this AOC will be further assessed as part of a site wide investigation.

4.6 AOC 11 – Former UST Area/EMI Interference

EMI interference in this location is likely due to former UST concrete slabs and steel tie-downs found during test pit excavations in AOC-11, these are likely former UST Deadman that were left in place. No USTs were encountered. Based on the results of soil and groundwater analytical data obtained during the December 2022 and March 2023 events, select soil constituents at test pits AOC11-TP01 through AOC11-TP04 and soil borings for MW-22-07 and MW-22-10 and select groundwater constituents for MW-22-07 and MW-22-10 are present at concentrations exceeding one or more applicable Michigan Part 201 cleanup criteria in AOC-11. Those include the following:

Soil

- Total Metals:
 - Chromium exceeded Michigan Part 201 generic GSIPC at AOC11-TP02, MW-22-07, and MW-22-10 based on the potential for chromium VI in soil. These potential impacts are likely naturally occurring in soil as all the concentrations detected are below the Part 201 default background criteria for total chromium, however speciated analysis for hexavalent chromium (to likely demonstrate hexavalent chromium is not present) is recommended to confirm that the Part 201 default background criteria apply to this AOC. The GSI may be a potential pathway due to a nearby storm sewer. It should be noted these soil impacts are not migrating to groundwater and the storm sewer flows to a

combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.

- Mercury exceeded Michigan Part 201 generic GSIPC at AOC11-TP01 through AOC-TP04, MW-22-07, and MW-22-10 and NR-VIAP at AOC11-TP02, AOC-TP03, MW-22-07, and MW-22-10, however these impacts are not migrating to groundwater. The GSI may be a potential pathway due to a nearby storm sewer. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area. The VIAP is incomplete at this time due to no buildings existing at the Site. Should buildings be built near or at AOC-9 in the future, institutional controls will require soil vapor assessment and or protective measures be completed prior to building or at the time of construction.

- SVOCs:

- Benzo(a)pyrene exceeded Michigan Part 201 generic NR-DCC at AOC11-TP03 and AOC11-TP04. These DCC exceedances are located at 5 ft bgs and are delineated by the bottom samples at 10 ft bgs. There is not an immediate concern for direct contact due to the property being fenced to the public and workers not working in this area of the Site. However, due to planned construction on the Site, this area will either be beneath a building or beneath a pavement cap parking lot to prevent future exposure.
- Fluoranthene exceeded Michigan Part 201 generic GSIPC at AOC-11-TP01, AOC11-TP03, and AOC11-04, however these impacts are not migrating to groundwater. The GSI may be a potential pathway due to a nearby storm sewer. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.
- Phenanthrene exceeded Michigan Part 201 generic GSIPC at AOC11-TP01 through AOC11-TP04, however these impacts are not migrating to groundwater. The GSI may be a potential pathway due to a nearby storm sewer. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.

- PFAS:

- PFOS exceeded Michigan Part 201 generic GSIPC at AOC11-TP01, AOC11-TP04, and MW-22-07. The GSI may be a potential pathway due to a nearby storm sewer. It should be noted the storm sewer flows to a combined sewer system in Pinecrest Drive which is treated at the POTW prior to discharge, however additional evaluation of this storm sewer is planned to determine the migration potential as part of next steps for the Southern Area.

Groundwater

- Total Metals:
 - Aluminum exceeded Michigan Part 201 generic NR-DWC at MW-22-10 in December 2022. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
 - Manganese exceeded Michigan Part 201 generic NR-DWC at MW-22-10 in December 2022 and at MW-22-07 and MW-22-10 in March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
- PFAS:
 - PFOA exceeded Michigan Part 201 generic NR-DWC at MW-22-10 in December 2022. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.

4.6.1 Next Steps

- Two hand auger borings are planned to be completed at AOC11-TP02 and MW-22-10 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare the total chromium data to the statewide background levels.
- MW-124 and MW-125 to be sampled as part of the AOC-11 investigation, could not be located and are presumed destroyed. These wells were below Part 201 cleanup criteria for VOCs and SVOCs and therefore will not be replaced with new shallow wells in this AOC. These wells will be attempted to be located, and if located in good condition, will be sampled as discussed in Section 5.0. If the wells are located and are damaged, the wells will be properly abandoned.
- Given hazardous substance buried waste or USTs were not encountered in AOC-11 during subsurface investigations, the anomaly was observed to be concrete UST Deadman left in place and observed soil impacts are not migrating to groundwater, AOC-11 should be considered completely assessed with no additional assessment necessary except for what is discussed above. The storm sewer in this AOC will be further assessed as part of a site wide investigation.

4.7 AOC 12 – EMI Interference – GPR Anomaly

Buried fill material, concrete foundation remnants and bricks were encountered during the test pits and soil borings. No hazardous substance buried waste was encountered. Based on the results of soil and groundwater analytical data obtained during the December 2022 and March 2023 events, select soil constituents at test pits AOC12-TP01 through AOC12-TP03 and soil borings for MW-22-20 and MW-22-21 and select groundwater constituents at MW-101, MW-102, MW-103, MW-22-20, and MW-22-21 are present at concentrations exceeding one or more applicable Michigan Part 201 cleanup criteria in AOC-12. Those include the following:

Soil

■ Total Metals:

- Aluminum exceeded Michigan Part 201 generic NR-DWPC at AOC12-TP01 but is delineated to below Part 201 cleanup criteria by MW-22-20 and AOC12-TP03. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
- Boron exceeded Michigan Part 201 generic NR-DWPC at AOC12-TP01 and MW-22-21 but is delineated to below Part 201 criteria by MW-22-20, MW-22-19 and MW-22-08. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls. These impacts are not migrating to groundwater.
- Chromium exceeded Michigan Part 201 generic GSIPC at AOC12-TP01 through AOC12-TP03, MW-22-20, and MW-22-21 based on the potential for chromium VI in soil. These potential impacts are likely naturally occurring in soil as all the concentrations detected are below the Part 201 default background criteria for total chromium, however speciated analysis for hexavalent chromium (to likely demonstrate hexavalent chromium is not present) is recommended to confirm that the Part 201 default background criteria apply to this AOC. The GSI is not a potential pathway due to no storm sewers being located near AOC-12.
- Manganese exceeded Michigan Part 201 generic NR-DWPC and GSIPC at AOC12-TP01 and AOC12-TP02 but are delineated to below Part 201 criteria by MW-22-20, MW-22-19 and MW-22-08. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls. The GSI is not a potential pathway due to no storm sewers being located near AOC-12.
- Mercury exceeded Michigan Part 201 generic GSIPC at AOC12-TP01, AOC12-TP03, and MW-22-21 and NR-VIAP at AOC12-TP01 but are delineated to below Part 201 criteria by MW-22-20 and MW-22-19 and is not migrating to groundwater. The GSI is not a potential pathway due to no storm sewers being located near AOC-12. The VIAP is incomplete at this time due to no buildings existing at the Site. Should buildings be built near or at AOC-12 in the future, institutional controls will require soil vapor assessment and or protective measures be completed prior to building or at the time of construction.

■ SVOCs:

- Benzo(a)pyrene exceeded Michigan Part 201 generic NR-DCC at AOC12-TP01. These DCC exceedances are located at 5 and 10 ft bgs and are delineated to below Part 201 cleanup criteria by AOC12-TP02, AOC12-TP03, MW-22-19 and MW-22-20 and not migrating to groundwater. There is not an immediate concern for direct contact due to the property being fenced to the public and workers not working in this area of the Site. However, this area will be either be beneath a building or beneath a pavement cap parking lot in the future to prevent exposure.
- Fluoranthene exceeded Michigan Part 201 generic GSIPC at AOC12-TP01 and MW-22-21 and are delineated to below Part 201 cleanup criteria by AOC12-TP02, AOC12-TP03, MW-22-19 and MW-22-20 and not migrating to groundwater. The GSI is not a potential pathway due to no storm sewers being located near AOC-12.

- Naphthalene exceeded Michigan Part 201 generic GSIPC at AOC12-TP01 and the NR-VIAP at AOC12-TP01 and are delineated to below Part 201 cleanup criteria by AOC12-TP02, AOC12-TP03, MW-22-19 and MW-22-20 and not migrating to groundwater. The GSI is not a potential pathway due to no storm sewers being located near AOC-12.
- Phenanthrene exceeded Michigan Part 201 generic GSIPC at AOC12-TP01, MW-22-20, and MW-22-21 and the NR-VIAP at AOC12-TP01. The GSI is not a potential pathway due to no storm sewers being located near AOC-12. The VIAP is incomplete at this time due to no buildings existing at the Site. Should buildings be built near or at AOC-12 in the future, institutional controls will require soil vapor assessment and or protective measures be completed prior to building or at the time of construction.
- PFAS:
 - PFOS exceeded Michigan Part 201 generic GSIPC at AOC12-TP01, AOC12-TP02, and MW-22-21 but are delineated to below Part 201 cleanup criteria by MW-22-20. The GSI is not a potential pathway due to no storm sewers being located near AOC-12.

Groundwater:

- Total Metals:
 - Aluminum exceeded Michigan Part 201 generic NR-DWC at MW-101 in March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
 - Manganese exceeded Michigan Part 201 generic NR-DWC at MW-103 in March 2023 and at MW-22-20 and MW-22-21 in both December 2022 and March 2023. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
- VOCs:
 - Hexachlorobutadiene exceeded Michigan Part 201 generic GSIPC at MW-103 in March 2023. The GSI is not a potential pathway due to no storm sewers being located near AOC-12. Off-site migration of VOCs to off-site storm sewers is being monitored by downgradient MW-104 and MW-105 which are non-detect for hexachlorobutadiene.
- PFAS:
 - PFOS exceeded Michigan Part 201 generic NR-DWC and GSIPC in December 2022 at MW-103 and GSIPC in March 2023 at MW-103. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.
 - PFOA exceeded Michigan Part 201 generic NR-DWC in December 2022 and March 2023 at MW-103. The drinking water pathway is incomplete due to the area using municipal water and TRC would recommend future Site institutional controls.

4.7.1 Next Steps

- Replacement of MW-102 due to it being dry and potentially filled in with sediment. This well will be properly abandoned and replaced as part of the next work plan discussed in Section 5.0.

- Two hand auger borings are planned to be completed at AOC12-TP01 and AOC12-TP03 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare the total chromium data to the statewide background levels.
- Although buried hazardous substance waste or USTs were not encountered in AOC-12 during subsurface investigations, test pitting was not completed in the full area of the anomalies. It is recommended four additional test pits be completed in the area of the anomalies to confirm the anomaly is a buried foundation and debris as suspected.

4.8 Sitewide – MW-22-22D

Several constituents were identified in MW-22-22D. The nature of the contaminants encountered in this well are indicative of what is typically found in groundwater wells installed within the as evidenced in the need for Consumers Energy to have a similar well within one mile of the Site. These contaminants in MW-22-22D are not found on the Site property and are separated from the Site contaminants by a double cased monitoring well and 105 feet of competent clay. Based on the results of groundwater analytical data obtained during the December 2022 and March 2023 events, select groundwater constituents for MW-22-22D are present at concentrations exceeding one or more applicable Michigan Part 201 cleanup criteria, however these constituents are not considered related to Site activities and additional assessment of these deep impacts will not be completed. The impacts include the following:

Groundwater

- Total Metals:
 - Aluminum exceeded Michigan Part 201 generic NR-DWC at MW-22-22D in March 2023.
 - Barium exceeded Michigan Part 201 generic GSIC at MW-22-22D in December 2022 and March 2023.
 - Boron exceeded Michigan Part 201 generic NR-DWC at MW-22-22D in December 2022 and March 2023.
 - Iron exceeded Michigan Part 201 generic NR-DWC at MW-22-22D in December 2022.
 - Manganese exceeded Michigan Part 201 generic NR-DWC at MW-22-22D in December 2022 and March 2023.
 - Selenium exceeded Michigan Part 201 generic GSIC at MW-22-22D in December 2022 and March 2023.
 - Sodium exceeded Michigan Part 201 generic NR-DWC and GSIC at MW-22-22D in December 2022 and March 2023.
- VOCs
 - Benzene exceeded Michigan Part 201 generic NR-DWC at MW-22-22D in December 2022 and March 2023.

5.0 Proposed Future Activities

Based on the soil and groundwater data, TRC proposes the following future activities be conducted to address the Southern Area. All proposed work will follow standard operating procedures, analytical methodology references and QA/QC requirements specified in the February 2022 RFI Workplan by Atlas and updated in July 2022 by TRC for this Site. Refer to **Figure 8** for a map of the proposed locations:

- **AOC 3:** Installation of two hand auger borings in AOC3-TP02 and AOC3-TP04 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare the total chromium data to background criteria.
- **AOC 7:** Installation of two hand auger borings at MW-22-08 and MW-22-09 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare the total chromium data to background criteria. Installation of one shallow monitoring well within AOC-7 to replace MW-126 if the original MW-126 cannot be located.
- **AOC 8:** Installation of two hand auger borings at MW-22-18 and MW-22-19 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare the total chromium data to the statewide background levels.
- **AOC 9:** Installation of one hand auger boring at SB-02 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare the total chromium data to the statewide background levels. Completion of one test pit in the area of the anomaly to confirm the status of any potential buried USTs. Installation of two shallow monitoring wells east of AOC-9.
- **AOC 10:** Completion of two hand auger borings are planned to be completed at AOC10-TP01, AOC10-TP02 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare the total chromium data to the statewide background levels. Installation of one shallow monitoring well in AOC-10 to replace MW-127 if the original MW-127 cannot be located.
- **AOC 11:** Installation of two hand auger borings at AOC11-TP02 and MW-22-10 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare the total chromium data to the statewide background levels.
- **AOC-12:** Installation of two hand auger borings at AOC12-TP01 and AOC12-TP02 to collect soil samples for chromium VI to determine if the chromium is naturally occurring to be able to compare the total chromium data to the statewide background levels. Completion of four test pits in the area of the anomalies to confirm the status of the anomalies. Abandonment and replacement of MW-102 due to this well being potentially filled with sediment and dry.
- Attempt to locate lost monitoring wells MW-122, MW-124, MW-125, MW-126, MW-127, MW-130, MW-131, MW-132, MW-133. If the wells are found to be damaged, they will be properly abandoned. If the wells are found to be in good condition and not damaged, groundwater samples will be collected from each well one time using the analysis list discussed below.
- Conduct two rounds of low-flow groundwater sampling at the two proposed new shallow monitoring wells (replacement MW-126 and MW-127 if installed). Sampling rounds will be at least 30 days apart. The constituents to be sampled for are the following based current on-Site detections above Part 201 cleanup criteria:

-
- VOCs 1,2-Dichlorobenzene, 1,2-dichloroethane, chlorobenzene, chloroform, hexachlorobutadiene, naphthalene, tetrachloroethene, trichloroethene and vinyl chloride per USEPA Method 8260B;
 - SVOCs: 2-nitrophenol, benzo(a)-pyrene, carbazole, fluoranthene, naphthalene and phenanthrene per USEPA Method 8270D.
 - Total Metals: aluminum, boron, chromium, copper, iron, lead, manganese, selenium, sodium, vanadium, zinc.
 - PFAS constituents PFNA, PFOS and PFOA by ASTM Method D7979.
 - The following as previously proposed in the RFI will not be analyzed in groundwater due to no detections above Part 201 cleanup criteria.
 - PCBs by USEPA Method 608.3
 - Tetraethyl Lead USEPA Method 8270D
 - Thorium by USEPA Methods 6010B/6020A;
 - TICs by USEPA Methods 8260B and 8270D
 - 1,4 dioxane by USEPA Method 8260B
 - Methanol USEPA Method 8015B;
 - Replacement of MW-121 (as part of the eastern Boundary Assessment) due to tree roots being present in the well which hinder the ability to collect representative groundwater samples.
 - Collect two quarterly rounds of groundwater sampling at upgradient monitoring wells MW-116, MW-117 and MW-118 and analyze the samples for PFAS constituents PFNA, PFOS and PFOA by ASTM Method D7979.
 - Complete an investigation to determine potential migration and groundwater infiltration to the combined sewer. This will include a detailed camera survey of the on-site sewer to determine where any bulk heading and backfilling of the sewer has occurred, and a detailed depth analysis along the length of the sewer to determine at what location the sewer dips below the groundwater table in the interior of the Site. Samples will be collected from the storm sewer water upgradient and downgradient of the Site to determine if there is infiltration. An evaluation of the Pinecrest Drive combined sewer main flow, depth and direction and a review of potential upgradient sources will be completed as part of the Eastern Boundary work plan.
 - Once the data is received from this proposed assessment work and two rounds of groundwater sampling, a report will be submitted which will propose next steps if any.
 - Complete a public communication website to share the data being collected with the community.

6.0 Proposed Schedule

The proposed work plan discussed in Section 5.0 will be initiated within 60 days of EGLE approval of the work plan. A Report documenting the results and next steps will be completed within 60 days of receipt of all data and/or completion of all tasks.

Tables

Table 1
 Summary of Groundwater Elevation Data - September 2022 to March 2023
 Former Hayes Lemmerz Site
 2000 West 8 Mile Road
 Ferndale, MI

Well Location	Installation Date	Well Screen Interval (ft BGS)	TOC Elevation (ft)	December 2022		March 2023	
				Depth to Water (ft BTOC)	Groundwater Elevation (ft)	Depth to Water (ft BTOC)	Groundwater Elevation (ft)

Notes:

Survey conducted by BMJ Engineers & Surveyors on October 27 and December 21, 2022.

Elevation in feet relative to North American Vertical Datum 1988 (NAVD 88).

TOC: Top of well casing.

ft BGS: Feet below ground surface.

ft BTOC: Feet below top of well casing.

--: Not measured

(1) Eastern boundary monitoring well static water levels were collected to construct a groundwater flow map for the March 2023 monitoring event.

Notes:
 Non-Residential (NR) Drinking Water Criteria (DWC), Groundwater Surface Water Interface (GSI), and Groundwater Contact Criteria from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 18, 2012.
 Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).
 The depth to first encountered groundwater is 10 feet below ground surface or less; therefore, the shallow groundwater residential VIAP screening levels apply.
 The depth to first encountered groundwater is greater than 5 feet below ground surface; therefore, the groundwater not in contact nonresidential VIAP screening levels apply.
 Only analytes with one or more detection are reported.
 ug/L = microgram per liter
 NA = Not Applicable; NC = No Criterion; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed
Bold font denotes concentrations detected above laboratory reporting limits.
 Denotes concentrations above one or more criteria.

1) In the absence of valence-specific criteria, total chromium results are conservatively screened against the criteria for chromium (VI), unless otherwise noted.
 2) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).
 3) Criterion dependent on hardness (Footnote (G), Michigan Part 201 Criteria Tables); Criterion shown is based on an estimated hardness of 150 mg CaCO₃/L for the southern Lower Peninsula per the EGLE RRDGSI Pathway Compliance Options, April 2018.
 4) Criterion is the aesthetic drinking water value (Footnote (E), Michigan Part 201 Criteria Tables).
 5) The reporting limit was above one or more criterion, the method detection limit has been substituted

Notes:
 Non-Residential (NR) Drinking Water Criteria (DWC), Groundwater Surface Water Interface (GSI), and Groundwater Contact Criteria from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 18, 2012.
 Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).
 The depth to first encountered groundwater is 10 feet below ground surface or less; therefore, the shallow groundwater residential VIAP screening levels apply.
 The depth to first encountered groundwater is greater than 5 feet below ground surface; therefore, the groundwater not in contact nonresidential VIAP screening levels apply.
 Only analytes with one or more detection are reported.
 ug/L = microgram per liter
 NA = Not Applicable; NC = No Criterion; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed
Bold font denotes concentrations detected above laboratory reporting limits.

- 1) In the absence of valence-spec Denotes concentrations above one or more criteria.
- 2) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote [X], Michigan Part 201 Criteria Tables).
- 3) Criterion dependent on hardness (Footnote [G], Michigan Part 201 Criteria Tables); Criterion shown is based on an estimated hardness of 150 mg CaCO₃/L for the southern Lower Peninsula per the EGLE RRDGSI Pathway Compliance Options, April 2018.
- 4) Criterion is the aesthetic drinking water value (Footnote [E], Michigan Part 201 Criteria Tables).
- 5) The reporting limit was above one or more criterion, the method detection limit has been substituted

Notes:

Non-Residential (NR) Drinking Water Criteria (DWC), Groundwater Surface Water Interface (GSI), and Groundwater Contact Criteria from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 18, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

The depth to first encountered groundwater is 10 feet below ground surface or less; therefore, the shallow groundwater residential VIAP screening levels apply.

The depth to first encountered groundwater is greater than 5 feet below ground surface; therefore, the groundwater not in contact nonresidential VIAP screening levels apply.

Only analytes with one or more detection are reported.

ug/L = microgram per liter

NA = Not Applicable; NC = No Criterion; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

 Denotes concentrations above one or more criteria.

1) In the absence of valence-specific criteria, total chromium results are conservatively screened against the criteria for chromium (VI), unless otherwise noted.

2) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

3) Criterion dependent on hardness (Footnote (G), Michigan Part 201 Criteria Tables); Criterion shown is based on an estimated hardness of 150 mg CaCO₃/L for the southern Lower Peninsula per the EGLE RRDGSI Pathway Compliance Options, April 2018.

4) Criterion is the aesthetic drinking water value (Footnote (E), Michigan Part 201 Criteria Tables).

5) The reporting limit was above one or more criterion, the method detection limit has been substituted

Notes:

Non-Residential (NR) Drinking Water Criteria (DWC), Groundwater Surface Water Interface (GSI), and Groundwater Contact Criteria from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 18, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

The depth to first encountered groundwater is 10 feet below ground surface or less; therefore, the shallow groundwater residential VIAP screening levels apply.

The depth to first encountered groundwater is greater than 5 feet below ground surface; therefore, the groundwater not in contact nonresidential VIAP screening levels apply.

Only analytes with one or more detection are reported.

ug/L = microgram per liter

NA = Not Applicable; No Criterion; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

Denotes concentrations above one or more criteria.

1) Criterion is the aesthetic drinking water value (Footnote (E), Michigan Part 201 Criteria Tables).

2) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

3) The VIAP criterion was below Target Detection Limits (TDL), the TDL has been substituted (Footnote (M), VIAP Guidance Document)

Notes:
 Non-Residential (NR) Drinking Water Criteria (DWC), Groundwater Surface Water Interface (GSI), and Groundwater Contact Criteria from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 18, 2012.
 Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).
 The depth to first encountered groundwater is 10 feet below ground surface or less; therefore, the shallow groundwater residential VIAP screening levels apply.
 The depth to first encountered groundwater is greater than 5 feet below ground surface; therefore, the groundwater not in contact nonresidential VIAP screening levels apply.
 Only analytes with one or more detection are reported.
 ug/L = microgram per liter
 NA = Not Applicable; No Criterion; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed
Bold font denotes concentrations detected above laboratory reporting limits.
 Denotes concentrations above one or more criteria.
 1) Criterion is the aesthetic drinking water value (Footnote (E), Michigan Part 201 Criteria Tables).
 2) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).
 3) The VIAP criterion was below Target Detection Limits (TDL), the TDL has been substituted (Footnote (M), VIAP Guidance Document)

Notes:

Non-Residential (NR) Drinking Water Criteria (DWC), Groundwater Surface Water Interface (GSI), and Groundwater Contact Criteria from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 18, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

The depth to first encountered groundwater is 10 feet below ground surface or less; therefore, the shallow groundwater residential VIAP screening levels apply.

The depth to first encountered groundwater is greater than 5 feet below ground surface; therefore, the groundwater not in contact nonresidential VIAP screening levels apply.

Only analytes with one or more detection are reported.

ug/L = microgram per liter

NA = Not Applicable; No Criterion; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

Green background Denotes concentrations above one or more criteria.

1) Criterion is the aesthetic drinking water value (Footnote {E}, Michigan Part 201 Criteria Tables).

2) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote {X}, Michigan Part 201 Criteria Tables).

3) The VIAP criterion was below Target Detection Limits (TDL), the TDL has been substituted (Footnote {M}, VIAP Guidance Document)

Notes:

Non-Residential (NR) Drinking Water Criteria (DWC), Groundwater Surface Water Interface (GSI), and Groundwater Contact Criteria from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 18, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

The depth to first encountered groundwater is 10 feet below ground surface or less; therefore, the shallow groundwater residential VIAP screening levels apply.

The depth to first encountered groundwater is greater than 5 feet below ground surface; therefore, the groundwater not in contact nonresidential VIAP screening levels apply.

Only analytes with one or more detection are reported.

ug/L = microgram per liter

NA = Not Applicable; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

Green background Denotes concentrations above one or more criteria.

1) Criteria for carcinogenic polycyclic aromatic hydrocarbons were developed using relative potential potencies to benzo(a)pyrene (Footnote (Q), Michigan Part 201 Criteria Tables).

2) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

3) The VIAP criterion was below Target Detection Limits (TDL), the TDL has been substituted (Footnote (M), VIAP Guidance Document)

Notes:
 Non-Residential (NR) Drinking Water Criteria (DWC), Groundwater Surface Water Interface (GSI), and Groundwater Contact Criteria from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 18, 2012.
 Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).
 The depth to first encountered groundwater is 10 feet below ground surface or less; therefore, the shallow groundwater residential VIAP screening levels apply.
 The depth to first encountered groundwater is greater than 5 feet below ground surface; therefore, the groundwater not in contact nonresidential VIAP screening levels apply.
 Only analytes with one or more detection are reported.
 ng/L = nanogram per liter
 NC = No Criterion; -- = Parameter Not Analyzed
Bold font denotes concentrations detected above laboratory reporting limits.
 Denotes concentrations above one or more criteria.

1) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

Notes:

Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, NR Soil Direct Contact Criteria, NR Infinite Source Volatile Soil Inhalation Criteria (VSIC), and NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

Only analytes with one or more detection are reported.

ug/kg = microgram per kilogram

NA = Not Applicable; NC = No Criterion; NLV = Not Likely to Volatilize; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

Green background Denotes concentrations above one or more criteria.

1) Criterion for chromium (VI).

2) Criterion dependent on hardness (Footnote (G), Michigan Part 201 Criteria Tables); Criterion shown is based on an estimated hardness of 150 mg CaCO₃/L for the southern Lower Peninsula per the EGLE RRD GSI Pathway Compliance Options, April 2018.

3) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

4) Background as defined in R299.5701(b) may be substituted if higher than the calculated clean up criterion (Footnote (B), Michigan Part 201 Criteria Tables).

5) Value for total chromium.

Notes:

Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, NR Soil Direct Contact Criteria, NR Infinite Source Volatile Soil Inhalation Criteria (VSIC), and NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

Only analytes with one or more detection are reported.

ug/kg = microgram per kilogram

NA = Not Applicable; NC = No Criterion; NLV = Not Likely to Volatilize; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

Green background denotes concentrations above one or more criteria.

1) Criterion for chromium (VI).

2) Criterion dependent on hardness (Footnote {G}, Michigan Part 201 Criteria Tables); Criterion shown is based on an estimated hardness of 150 mg CaCO₃/L for the southern Lower Peninsula per the EGLE RRD *GSI Pathway Compliance Options*, April 2018.

3) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote {X}, Michigan Part 201 Criteria Tables).

4) Background as defined in R299.5701(b) may be substituted if higher than the calculated clean up criterion (Footnote {B}, Michigan Part 201 Criteria Tables).

5) Value for total chromium.

Notes:
 Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, NR Soil Direct Contact Criteria, NR Infinite Source Volatile Soil Inhalation Criteria (VSIC), and NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.
 Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).
 Only analytes with one or more detection are reported.
 ug/kg = microgram per kilogram
 NA = Not Applicable; NC = No Criterion; NLV = Not Likely to Volatilize; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed
Bold font denotes concentrations detected above laboratory reporting limits.
 Denotes concentrations above one or more criteria.
 1) Criterion for chromium (VI).
 2) Criterion dependent on hardness (Footnote {G}, Michigan Part 201 Criteria Tables); Criterion shown is based on an estimated hardness of 150 mg CaCO₃/L for the southern Lower Peninsula per the EGLE RRD *GSI Pathway Compliance Options*, April 2018.
 3) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote {X}, Michigan Part 201 Criteria Tables).
 4) Background as defined in R299.5701(b) may be substituted if higher than the calculated clean up criterion (Footnote {B}, Michigan Part 201 Criteria Tables).
 5) Value for total chromium.

Notes:

Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, NR Soil Direct Contact Criteria, NR Infinite Source Volatile Soil Inhalation Criteria (VSIC), and NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

Only analytes with one or more detection are reported.

ug/kg = microgram per kilogram

NA = Not Applicable; NC = No Criterion; NLV = Not Likely to Volatilize; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

Green background Denotes concentrations above one or more criteria.

1) Criterion for chromium (VI).

2) Criterion dependent on hardness (Footnote (G), Michigan Part 201 Criteria Tables); Criterion shown is based on an estimated hardness of 150 mg CaCO₃/L for the southern Lower Peninsula per the EGLE RRD *GSI Pathway Compliance Options*, April 2018.

3) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

4) Background as defined in R299.5701(b) may be substituted if higher than the calculated clean up criterion (Footnote (B), Michigan Part 201 Criteria Tables).

5) Value for total chromium.

Notes:
 Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, NR Soil Direct Contact Criteria, NR Infinite Source Volatile Soil Inhalation Criteria (VSIC), and NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.
 Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).
 Only analytes with one or more detection are reported.
 ug/kg = microgram per kilogram
 NA = Not Applicable; NC = No Criterion; NLV = Not Likely to Volatilize; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed
Bold font denotes concentrations detected above laboratory reporting limits.
 Denotes concentrations above one or more criteria.
 1) Criterion for chromium (VI).
 2) Criterion dependent on hardness (Footnote (G), Michigan Part 201 Criteria Tables); Criterion shown is based on an estimated hardness of 150 mg CaCO₃/L for the southern Lower Peninsula per the EGLE RRD *GSI Pathway Compliance Options*, April 2018.
 3) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).
 4) Background as defined in R299.5701(b) may be substituted if higher than the calculated clean up criterion (Footnote (B), Michigan Part 201 Criteria Tables).
 5) Value for total chromium.

Notes:
 Residential (R)/Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, R/NR Groundwater Contact Protection Criteria, R/NR Soil Direct Contact Criteria, R/NR Infinite Source Volatile Soil Inhalation Criteria (VSIC), and R/NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.
 Residential (R) and Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).
 Only analytes with one or more detection are reported.
 ug/kg = microgram per kilogram
 NA = Not Applicable; NC = No Criterion; NLV = Not Likely to Volatilize; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed
Bold font denotes concentrations detected above laboratory reporting limits.
 Denotes concentrations above one or more criteria.

- 1) Criterion for chromium (VI).
- 2) Criterion dependent on hardness (Footnote {G}, Michigan Part 201 Criteria Tables); Criterion shown is based on an estimated hardness of 150 mg CaCO₃/L for the southern Lower Peninsula per the EGLE RRD *GSI Pathway Compliance Options*, April 2018.
- 3) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote {X}, Michigan Part 201 Criteria Tables).
- 4) Background as defined in R299.5701(b) may be substituted if higher than the calculated clean up criterion (Footnote {B}, Michigan Part 201 Criteria Tables).
- 5) Value for total chromium.

Notes:
 Residential (R)/Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, R/NR Groundwater Contact Protection Criteria, R/NR Soil Direct Contact Criteria, R/NR Infinite Source Volatile Soil Inhalation Criteria (VSIC), and R/NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.
 Residential (R) and Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).
 Only analytes with one or more detection are reported.
 ug/kg = microgram per kilogram
 NA = Not Applicable; NC = No Criterion; NLV = Not Likely to Volatilize; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed
Bold font denotes concentrations detected above laboratory reporting limits.
 Denotes concentrations above one or more criteria.
 1) Criterion for chromium (VI).
 2) Criterion dependent on hardness (Footnote {G}, Michigan Part 201 Criteria Tables); Criterion shown is based on an estimated hardness of 150 mg CaCO₃/L for the southern Lower Peninsula per the EGLE RRD *GSI Pathway Compliance Options*, April 2018.
 3) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote {X}, Michigan Part 201 Criteria Tables).
 4) Background as defined in R299.5701(b) may be substituted if higher than the calculated clean up criterion (Footnote {B}, Michigan Part 201 Criteria Tables).
 5) Value for total chromium.

Notes:

Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, NR Soil Direct Contact Criteria, NR Infinite Source Volatile Soil Inhalation Criteria (VSIC), and NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

Only analytes with one or more detection are reported.

ug/kg = microgram per kilogram

NA = Not Applicable; NLL = Not Likely to Leach; NLV = Not Likely to Volatilize; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

Green background denotes concentrations above one or more criteria.

1) Criteria for carcinogenic polycyclic aromatic hydrocarbons were developed using relative potential potencies to benzo(a)pyrene (Footnote (Q), Michigan Part 201 Criteria Tables).

2) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

Notes:

Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, NR Soil Direct Contact Criteria, NR Infinite Source Volatile Soil Inhalation Criteria (VSIC), and NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

Only analytes with one or more detection are reported.

ug/kg = microgram per kilogram

NA = Not Applicable; NLL = Not Likely to Leach; NLV = Not Likely to Volatilize; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

Green background denotes concentrations above one or more criteria.

1) Criteria for carcinogenic polycyclic aromatic hydrocarbons were developed using relative potential potencies to benzo(a)pyrene (Footnote (Q), Michigan Part 201 Criteria Tables).

2) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

Notes:

Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, NR Soil Direct Contact Criteria, NR Infinite Source Volatile Soil Inhalation Criteria (VSIC), and NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

Only analytes with one or more detection are reported.

ug/kg = microgram per kilogram

NA = Not Applicable; NLL = Not Likely to Leach; NLV = Not Likely to Volatilize; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

Green background denotes concentrations above one or more criteria.

1) Criteria for carcinogenic polycyclic aromatic hydrocarbons were developed using relative potential potencies to benzo(a)pyrene (Footnote (Q), Michigan Part 201 Criteria Tables).

2) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

Notes:

Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, NR Soil Direct Contact Criteria, NR Infinite Source Volatile Soil Inhalation Criteria (VSIC),

and NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

Only analytes with one or more detection are reported.

ug/kg = microgram per kilogram

NA = Not Applicable; NLL = Not Likely to Leach; NLV = Not Likely to Volatilize; ID = Insufficient Data to Develop Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

Green background denotes concentrations above one or more criteria.

1) Criteria for carcinogenic polycyclic aromatic hydrocarbons were developed using relative potential potencies to benzo(a)pyrene (Footnote (Q), Michigan Part 201 Criteria Tables).

2) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

Notes:

Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, NR Soil Direct Contact Criteria, NR Infinite Source Volatile Soil Inhalation Criteria (VSIC), and NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

Only analytes with one or more detection are reported.

ng/kg = nanogram per kilogram

NA = Not Applicable; NC = No Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

Denotes concentrations above one or more criteria.

1) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

Notes:

Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, NR Soil Direct Contact Criteria, NR Infinite Source Volatile Soil Inhalation Criteria (VSIC), and NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

Only analytes with one or more detection are reported.

ng/kg = nanogram per kilogram

NA = Not Applicable; NC = No Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

Green background denotes concentrations above one or more criteria.

1) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

Notes:

Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, NR Soil Direct Contact Criteria, NR Infinite Source Volatile Soil Inhalation Criteria (VSIC), and NR Particulate Soil Inhalation Criteria (PSIC) from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.

Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).

Only analytes with one or more detection are reported.

ng/kg = nanogram per kilogram

NA = Not Applicable; NC = No Criterion; -- = Parameter Not Analyzed

Bold font denotes concentrations detected above laboratory reporting limits.

Green background denotes concentrations above one or more criteria.

1) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

Statewide Default Background Levels	6.9E+06 ⁽⁴⁾	NA	18,000 ⁽⁵⁾	6,800 ⁽⁴⁾	1.2E+07 ⁽⁴⁾	4.4E+5 ⁽⁴⁾	130 ⁽¹⁾	410 ⁽⁴⁾	47,000
Units	ug/kg	ug/kg	ug/kg	ug/kg	ug/kg	ug/kg	ug/kg	ug/kg	ug/kg

Notes:
 Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, and NR Soil Direct Contact Criteria from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.
 Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).
 ug/kg = microgram per kilogram
 NA = Not Applicable; NC = No Criteria
Bold font denotes concentrations detected above laboratory reporting limits.
 Denotes concentrations above one or more criteria.

1) Criterion for chromium (VI).
 2) Criterion dependent on hardness (Footnote (G), Michigan Part 201 Criteria Tables). Criterion shown is based on an estimated hardness of 150 mg CaCO₃/L for the southern Lower Peninsula per the EGLE RRD GSI Pathway Compliance Options, April 2018.
 3) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).
 4) Background as defined in R299.5701(b) may be substituted if higher than the calculated clean up criterion (Footnote (B), Michigan Part 201 Criteria Tables).

Analyte	Benzo(a)pyrene ⁽¹⁾	Fluoranthene	Hexachlorobenzene	Naphthalene	Phenanthrene
Generic GSI Protection Criteria	NLL	5,500	350	730	2,100
Non-Residential MIP Screening Level	NA	NA	120	1,900	29,000
Non-Residential Direct Contact Criteria	8,000	1.3E+08	37,000	5.2E+07	5.2E+06
Units	ug/kg	ug/kg	ug/kg	ug/kg	ug/kg

Notes:
 Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, and NR Soil Direct Contact Criteria from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.
 Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).
 ug/kg = microgram per kilogram
 NA = Not Applicable; NLL = Not Likely to Leach
Bold font denotes concentrations detected above laboratory reporting limits.
 Denotes concentrations above one or more criteria.

1) Criteria for carcinogenic polycyclic aromatic hydrocarbons were developed using relative potential potencies to benzo(a)pyrene (Footnote (Q), Michigan Part 201 Criteria Tables).

Analyte	Hexachloro-butadiene	Methanol	Naphthalene	Trichlorofluoromethane (Freon 11)
Non-Residential DWP Criteria	72,000	2.0E+05	1.0E+05	1.5E+05
Generic GSI Protection Criteria	91	3.1E+06	730	NA
Non-Residential MIP Screening Level	69	1.7E+07	1,900	340
Units	ug/kg	ug/kg	ug/kg	ug/kg

Notes:
 Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, and NR Soil Direct Contact Criteria from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.
 Non-Residential (NR) Volatilization to Indoor Air Pathway (VIAP) Screening Levels from Appendix D.1 of the Addendum to the EGLE Guidance Document for the Vapor Intrusion Pathway (September 2020).
 ug/kg = microgram per kilogram
 NA = Not Applicable
Bold font denotes concentrations detected above laboratory reporting limits.
 Denotes concentrations above one or more criteria.

Analyte	Perfluorooctane sulfonic acid (PFOS)
Generic GSI Protection Criteria	240 ⁽¹⁾
Units	ng/kg

Notes:
 Non-Residential (NR) Drinking Water Protection (DWP) Criteria, Groundwater Surface Water Interface (GSI) Protection Criteria, NR Groundwater Contact Protection Criteria, and NR Soil Direct Contact Criteria from Michigan Part 201 Generic Cleanup Criteria, as promulgated September 28, 2012.
 ng/kg = nanogram per kilogram
Bold font denotes concentrations detected above laboratory reporting limits.
 Denotes concentrations above one or more criteria.

1) The GSI criterion is not protective for surface water that is used as a drinking water source (Footnote (X), Michigan Part 201 Criteria Tables).

Analytical Laboratory Report

General Report Notes

Analytical results relate only to the samples tested, in the condition received by the laboratory.

Methods may be modified for improved performance.

Results reported on a dry weight basis where applicable.

'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).

When MDL results are provided, then 'Not detected' indicates that parameter was not found at a level equal to or greater than the MDL.

40 CFR Part 136 Table II Required Containers, Preservation Techniques and Holding Times for the Clean Water Act specify that samples for acrolein and acrylonitrile, and 2-chloroethylvinyl ether need to be preserved at a pH in the range of 4 to 5 or if not preserved, analyzed within 3 days of sampling.

QA/QC corresponding to this analytical report is a separate document with the same Merit ID reference and is available upon request.

Full accreditation certificates are available upon request. Starred (*) analytes are not NELAP accredited.

Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.

Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc.

Limits for drinking water samples, are listed as the MCL Limits (Maximum Contaminant Level Concentrations)

PFAS requirement: Section 9.3.8 of U.S. EPA Method 537.1 states "If the method analyte(s) found in the Field Sample is present in the

FRB at a concentration greater than 1/3 the MRL, then all samples collected with that FRB are invalid and must be recollected and reanalyzed."

Samples submitted without an accompanying FRB may not be acceptable for compliance purposes.

Wisconsin PFAs analysis: MDL = LOD; RL = LOQ. LOD and LOQ are adjusted for dilution.

Report Narrative

There is no additional narrative for this analytical report

Analytical Laboratory Report

Laboratory Certifications

Authority	Certification ID
Michigan DEQ	#9956
DOD ELAP/ISO 17025	#69699
WBENC	#2005110032
Ohio VAP	#CL0002
Indiana DOH	#C-MI-07
New York NELAC	#11814
North Carolina DENR	#680
North Carolina DOH	#26702
Alaska CSLAP	#17-001
Pennsylvania DEP	#68-05884
Wisconsin DNR	FID# 399147320

Qualifier Descriptions

Qualifier	Description
!	Result is outside of stated limit criteria
B	Compound also found in associated method blank
E	Concentration exceeds calibration range
F	Analysis run outside of holding time
G	Estimated result due to extraction run outside of holding time
H	Sample submitted and run outside of holding time
I	Matrix interference with internal standard
J	Estimated value less than reporting limit, but greater than MDL
L	Elevated reporting limit due to low sample amount
M	Result reported to MDL not RDL
O	Analysis performed by outside laboratory. See attached report.
R	Preliminary result
S	Surrogate recovery outside of control limits
T	No correction for total solids
X	Elevated reporting limit due to matrix interference
Y	Elevated reporting limit due to high target concentration
b	Value detected less than reporting limit, but greater than MDL
e	Reported value estimated due to interference
j	Analyte also found in associated method blank
p	Benzo(b)Fluoranthene and Benzo(k)Fluoranthene integrated as one peak.
x	Preserved from bulk sample

Analytical Laboratory Report

General Report Notes

Analytical results relate only to the samples tested, in the condition received by the laboratory.

Methods may be modified for improved performance.

Results reported on a dry weight basis where applicable.

'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).

When MDL results are provided, then 'Not detected' indicates that parameter was not found at a level equal to or greater than the MDL.

40 CFR Part 136 Table II Required Containers, Preservation Techniques and Holding Times for the Clean Water Act specify that samples for acrolein and acrylonitrile, and 2-chloroethylvinyl ether need to be preserved at a pH in the range of 4 to 5 or if not preserved, analyzed within 3 days of sampling.

QA/QC corresponding to this analytical report is a separate document with the same Merit ID reference and is available upon request.

Full accreditation certificates are available upon request. Starred (*) analytes are not NELAP accredited.

Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.

Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc.

Limits for drinking water samples, are listed as the MCL Limits (Maximum Contaminant Level Concentrations)

PFAS requirement: Section 9.3.8 of U.S. EPA Method 537.1 states "If the method analyte(s) found in the Field Sample is present in the

FRB at a concentration greater than 1/3 the MRL, then all samples collected with that FRB are invalid and must be recollected and reanalyzed."

Samples submitted without an accompanying FRB may not be acceptable for compliance purposes.

Wisconsin PFAs analysis: MDL = LOD; RL = LOQ. LOD and LOQ are adjusted for dilution.

Report Narrative

There is no additional narrative for this analytical report

Analytical Laboratory Report

Laboratory Certifications

Authority	Certification ID
Michigan DEQ	#9956
DOD ELAP/ISO 17025	#69699
WBENC	#2005110032
Ohio VAP	#CL0002
Indiana DOH	#C-MI-07
New York NELAC	#11814
North Carolina DENR	#680
North Carolina DOH	#26702
Alaska CSLAP	#17-001
Pennsylvania DEP	#68-05884
Wisconsin DNR	FID# 399147320

Qualifier Descriptions

Qualifier	Description
!	Result is outside of stated limit criteria
B	Compound also found in associated method blank
E	Concentration exceeds calibration range
F	Analysis run outside of holding time
G	Estimated result due to extraction run outside of holding time
H	Sample submitted and run outside of holding time
I	Matrix interference with internal standard
J	Estimated value less than reporting limit, but greater than MDL
L	Elevated reporting limit due to low sample amount
M	Result reported to MDL not RDL
O	Analysis performed by outside laboratory. See attached report.
R	Preliminary result
S	Surrogate recovery outside of control limits
T	No correction for total solids
X	Elevated reporting limit due to matrix interference
Y	Elevated reporting limit due to high target concentration
b	Value detected less than reporting limit, but greater than MDL
e	Reported value estimated due to interference
j	Analyte also found in associated method blank
p	Benzo(b)Fluoranthene and Benzo(k)Fluoranthene integrated as one peak.
x	Preserved from bulk sample

Glossary of Abbreviations

Abbreviation	Description
RL/RDL	Reporting Limit
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
SW	EPA SW 846 (Soil and Wastewater) Methods
E	EPA Methods
SM	Standard Methods
LN	Linear
BR	Branched

Method Summary

Method	Version
ASTM D7968-17M	ASTM Method D7968 - 17 Modified (Isotopic Dilution)

Analytical Laboratory Report

General Report Notes

Analytical results relate only to the samples tested, in the condition received by the laboratory.

Methods may be modified for improved performance.

Results reported on a dry weight basis where applicable.

'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).

When MDL results are provided, then 'Not detected' indicates that parameter was not found at a level equal to or greater than the MDL.

40 CFR Part 136 Table II Required Containers, Preservation Techniques and Holding Times for the Clean Water Act specify that samples for acrolein and acrylonitrile, and 2-chloroethylvinyl ether need to be preserved at a pH in the range of 4 to 5 or if not preserved, analyzed within 3 days of sampling.

QA/QC corresponding to this analytical report is a separate document with the same Merit ID reference and is available upon request.

Full accreditation certificates are available upon request. Starred (*) analytes are not NELAP accredited.

Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.

Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc.

Limits for drinking water samples, are listed as the MCL Limits (Maximum Contaminant Level Concentrations)

PFAS requirement: Section 9.3.8 of U.S. EPA Method 537.1 states "If the method analyte(s) found in the Field Sample is present in the

FRB at a concentration greater than 1/3 the MRL, then all samples collected with that FRB are invalid and must be recollected and reanalyzed."

Samples submitted without an accompanying FRB may not be acceptable for compliance purposes.

Wisconsin PFAs analysis: MDL = LOD; RL = LOQ. LOD and LOQ are adjusted for dilution.

Report Narrative

There is no additional narrative for this analytical report

Analytical Laboratory Report

Laboratory Certifications

Authority	Certification ID
Michigan DEQ	#9956
DOD ELAP/ISO 17025	#69699

Wisconsin DNR	FID# 399147320

Qualifier Descriptions

Qualifier	Description
!	Result is outside of stated limit criteria
B	Compound also found in associated method blank
E	Concentration exceeds calibration range
F	Analysis run outside of holding time
G	Estimated result due to extraction run outside of holding time
H	Sample submitted and run outside of holding time
I	Matrix interference with internal standard
J	Estimated value less than reporting limit, but greater than MDL
L	Elevated reporting limit due to low sample amount
M	Result reported to MDL not RDL
O	Analysis performed by outside laboratory. See attached report.
R	Preliminary result
S	Surrogate recovery outside of control limits
T	No correction for total solids
X	Elevated reporting limit due to matrix interference
Y	Elevated reporting limit due to high target concentration
b	Value detected less than reporting limit, but greater than MDL
e	Reported value estimated due to interference
j	Analyte also found in associated method blank
p	Benzo(b)Fluoranthene and Benzo(k)Fluoranthene integrated as one peak.
x	Preserved from bulk sample

Selection	Description	Note
-----------	-------------	------

Sample Receiving

- | | | |
|-----|--|--|
| 01. | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A | Samples are received at 4C +/- 2C Thermometer # IR 4.2 |
| 02. | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A | Received on ice/ cooling process begun |
| 03. | <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A | Samples shipped |
| 04. | <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A | Samples left in 24 hr. drop box |
| 05. | <input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A | Are there custody seals/tape or is the drop box locked |

Chain of Custody

- | | | |
|-----|--|--|
| 06. | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A | COC adequately filled out |
| 07. | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A | COC signed and relinquished to the lab |
| 08. | <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A | Sample tag on bottles match COC
Three MeOH vial labels were illegible. Samples .03-.05 only had one MeOH each there were legible. |
| 09. | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A | Subcontracting needed? Subcontracted to: Eurofins |

Preservation

- | | | |
|-----|--|---|
| 10. | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A | Do sample have correct chemical preservation |
| 11. | <input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A | Completed pH checks on preserved samples? (no VOAs) |
| 12. | <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A | Did any samples need to be preserved in the lab? |

Bottle Conditions

- | | | |
|-----|--|---|
| 13. | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A | All bottles intact |
| 14. | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A | Appropriate analytical bottles are used |
| 15. | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A | Merit bottles used |
| 16. | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A | Sufficient sample volume received |
| 17. | <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A | Samples require laboratory filtration |
| 18. | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A | Samples submitted within holding time |
| 19. | <input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A | Do water VOC or TOX bottles contain headspace |

Corrective action for all exceptions is to call the client and to notify the project manager.

JOB DESCRIPTION

Merit Laboratories

JOB NUMBER

190-30658-1

Eurofins Michigan

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Narrative

Job Narrative 190-30658-1

Receipt

The samples were received on 12/16/2022 12:38 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 6.6°C

GC/MS Semi VOA

Method 8270D: The following samples: S43471.03 (190-30658-3), S43471.04 (190-30658-4), S43471.05 (190-30658-5), S43471.06 (190-30658-6), S43471.07 (190-30658-7), S43471.08 (190-30658-8), S43471.09 (190-30658-9), S43471.10 (190-30658-10) and S43471.14 (190-30658-14) was decanted prior to preparation .

Method 8270D: The following samples: S43471.16 (190-30658-16), S43471.17 (190-30658-17), S43471.23 (190-30658-23), S43471.24 (190-30658-24), (190-30658-C-16 MS) and (190-30658-C-16 MSD) was decanted prior to preparation .

Method 8270D: The following samples were diluted due to color, appearance, and viscosity: S43471.01 (190-30658-1), S43471.02 (190-30658-2), S43471.03 (190-30658-3), S43471.04 (190-30658-4), S43471.05 (190-30658-5), S43471.06 (190-30658-6), S43471.11 (190-30658-11) and S43471.15 (190-30658-15). Elevated reporting limits (RL) are provided.

Method 8270D: The following samples were diluted due to color, appearance, and viscosity: S43471.17 (190-30658-17), S43471.18 (190-30658-18), S43471.19 (190-30658-19), S43471.20 (190-30658-20), S43471.21 (190-30658-21), S43471.22 (190-30658-22), S43471.24 (190-30658-24), S43471.25 (190-30658-25) and S43471.26 (190-30658-26). Elevated reporting limits (RL) are provided.

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: S43471.23 (190-30658-23) and S43471.25 (190-30658-25). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method MOISTURE_2540G: The sample duplicate precision for the following sample associated with analytical batch 680-755948 was outside control limits: (190-30658-A-2 DU). The associated Laboratory Control Sample / Laboratory Control Sample Duplicate (LCS/LCSD) precision met acceptance criteria.

Method MOISTURE_2540G: The sample duplicate precision for the following sample associated with analytical batch 680-755958 was outside control limits: (190-30658-A-10 DU) and (190-30658-A-34 DU). The associated Laboratory Control Sample / Laboratory Control Sample Duplicate (LCS/LCSD) precision met acceptance criteria.

Method MOISTURE_2540G: The sample duplicate precision for the following sample associated with analytical batch 680-756199 was outside control limits: (190-30658-A-27 DU). The associated Laboratory Control Sample / Laboratory Control Sample Duplicate (LCS/LCSD) precision met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Geotechnical

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job ID: 190-30658-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
S1-	Surrogate recovery exceeds control limits, low biased.

General Chemistry

Qualifier	Qualifier Description
F3	Duplicate RPD exceeds the control limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Company: TestAmerica Laboratories, Inc.		E-Mail: Sue.Schaefer@et.eurofins.com	Page: Page 1 of 1
Address: 13715 Rider Trail North, Earth City State, Zip MO, 63045		State of Origin: Michigan	Job #: 190-30658-1
Phone: 314-298-8566(Tel) 314-298-8757(Fax)		Accreditations Required (See note)	Preservation Codes: M - Hexane N - None O - ASN02 P - Na2O4S Q - Na2SO3 R - Na2S2O3 S - H2SO4 T - TSP Dodecahydrate U - Acetone V - MCAA W - pH 4-5 Y - Trizma Z - other (specify)
Email: Project Name: Merit Laboratories		Analysis Requested	Other: L - EDTA K - EDTA J - DI Water I - Ice H - Ascorbic Acid G - Amchlor F - MeOH E - NaHSO4 D - Nitric Acid C - Zn Acetate B - NaOH A - HCL
SSOW#: 19001249		Field Filtered Sample (Yes or No)	Total Number of containers
Sample Date: 12/13/22		Perform MS/MSD (Yes or No)	Special Instructions/Note:
Sample Time: 08:36 Eastern		6020B/3050B 2% (MD) Specialty Metals	1
Sample Type (C=Comp, G=grab)		Molture	
Sample Preservation Code: Solid			
Matrix (W=water, S=solid, O=other)			

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/testing/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

Possible Hazard Identification
 Unconfirmed
 Deliverable Requested: I, II, III, IV, Other (specify) Primary Deliverable Rank: 2

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
 Return To Client Disposal By Lab Archive For _____ Months

Note: Since laboratory accreditations are subject to change, Eurolins Environment Testing North Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody if the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/method being analyzed; the samples must be shipped back to the Eurolins Environment Testing North Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurolins Environment Testing North Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurolins Environment Testing North Central, LLC

Analytical Laboratory Report

General Report Notes

Analytical results relate only to the samples tested, in the condition received by the laboratory.

Methods may be modified for improved performance.

Results reported on a dry weight basis where applicable.

'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).

When MDL results are provided, then 'Not detected' indicates that parameter was not found at a level equal to or greater than the MDL.

40 CFR Part 136 Table II Required Containers, Preservation Techniques and Holding Times for the Clean Water Act specify that samples for acrolein and acrylonitrile, and 2-chloroethylvinyl ether need to be preserved at a pH in the range of 4 to 5 or if not preserved, analyzed within 3 days of sampling.

QA/QC corresponding to this analytical report is a separate document with the same Merit ID reference and is available upon request.

Full accreditation certificates are available upon request. Starred (*) analytes are not NELAP accredited.

Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.

Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc.

Limits for drinking water samples, are listed as the MCL Limits (Maximum Contaminant Level Concentrations)

PFAS requirement: Section 9.3.8 of U.S. EPA Method 537.1 states "If the method analyte(s) found in the Field Sample is present in the

FRB at a concentration greater than 1/3 the MRL, then all samples collected with that FRB are invalid and must be recollected and reanalyzed."

Samples submitted without an accompanying FRB may not be acceptable for compliance purposes.

Wisconsin PFAs analysis: MDL = LOD; RL = LOQ. LOD and LOQ are adjusted for dilution.

Report Narrative

There is no additional narrative for this analytical report

Analytical Laboratory Report

Laboratory Certifications

Authority	Certification ID
Michigan DEQ	#9956
DOD ELAP/ISO 17025	#69699
WBENC	#2005110032
Ohio VAP	#CL0002
Indiana DOH	#C-MI-07
New York NELAC	#11814
North Carolina DENR	#680
North Carolina DOH	#26702
Alaska CSLAP	#17-001
Pennsylvania DEP	#68-05884
Wisconsin DNR	FID# 399147320

Qualifier Descriptions

Qualifier	Description
!	Result is outside of stated limit criteria
B	Compound also found in associated method blank
E	Concentration exceeds calibration range
F	Analysis run outside of holding time
G	Estimated result due to extraction run outside of holding time
H	Sample submitted and run outside of holding time
I	Matrix interference with internal standard
J	Estimated value less than reporting limit, but greater than MDL
L	Elevated reporting limit due to low sample amount
M	Result reported to MDL not RDL
O	Analysis performed by outside laboratory. See attached report.
R	Preliminary result
S	Surrogate recovery outside of control limits
T	No correction for total solids
X	Elevated reporting limit due to matrix interference
Y	Elevated reporting limit due to high target concentration
b	Value detected less than reporting limit, but greater than MDL
e	Reported value estimated due to interference
j	Analyte also found in associated method blank
p	Benzo(b)Fluoranthene and Benzo(k)Fluoranthene integrated as one peak.
x	Preserved from bulk sample

Glossary of Abbreviations

Abbreviation	Description
RL/RDL	Reporting Limit
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
SW	EPA SW 846 (Soil and Wastewater) Methods
E	EPA Methods
SM	Standard Methods
LN	Linear
BR	Branched

Method Summary

Method	Version
ASTM D7968-17M	ASTM Method D7968 - 17 Modified (Isotopic Dilution)
SM2540B	Standard Method 2540 B 2015

Parameter Summary

Parameter	Synonym	Cas #
PFBA	Perfluorobutanoic Acid	375-22-4
PFPeA	Perfluoropentanoic Acid	2706-90-3
4:2 FTSA	4:2 Fluorotelomer Sulfonic Acid	757124-72-4
PFHxA	Perfluorohexanoic Acid	307-24-4
PFBS	Perfluorobutane sulfonic Acid	375-73-5
PFHpA	Perfluoroheptanoic Acid	375-85-9
PFPeS	Perfluoropentane Sulfonic Acid	2706-91-4
6:2 FTSA	6:2 Fluorotelomer Sulfonic Acid	27619-97-2
PFOA	Perfluorooctanoic Acid	335-67-1
PFHxS	Perfluorohexane Sulfonic Acid	355-46-4
PFHxS-LN	Perfluorohexane Sulfonic Acid - LN	355-46-4-LN
PFHxS-BR	Perfluorohexane Sulfonic Acid - BR	355-46-4-BR
PFNA	Perfluorononanoic Acid	375-95-1
8:2 FTSA	8:2 Fluorotelomer Sulfonic Acid	39108-34-4
PFHpS	Perfluoroheptane Sulfonic Acid	375-92-8
PFDA	Perfluorodecanoic Acid	335-76-2
N-MeFOSAA	N-methyl perfluorooctanesulfonamidoacetic acid	2355-31-9
EtFOSAA	N-Ethyl Perfluorooctane Sulfonamidoacetic Acid	2991-50-6
PFOS	Perfluorooctane Sulfonic Acid	1763-23-1
PFOS-LN	Perfluorooctane Sulfonic Acid - LN	1763-23-1-LN
PFOS-BR	Perfluorooctane Sulfonic Acid - BR	1763-23-1-BR
PFUnDA	Perfluoroundecanoic Acid	2058-94-8
PFNS	Perfluorononane Sulfonic Acid	68259-12-1
PFDoDA	Perfluorododecanoic Acid	307-55-1
PFDS	Perfluorodecane Sulfonic Acid	335-77-3
PFTTrDA	Perfluorotridecanoic Acid	72629-94-8
FOSA	Perfluorooctane Sulfonamide	754-91-6
PFTeDA	Perfluorotetradecanoic Acid	376-06-7
11Cl-PF3OUdS	11-chloroeicosafuoro-3-oxaundecane-1-sulfonic acid	763051-92-9
9Cl-PF3ONS	9-chlorohexadecafluoro-3-oxanone1-sulfonic acid	756426-58-1
ADONA	4,8-dioxa-3H-perfluorononanoic acid	919005-14-4
HFPO-DA	Hexafluoropropylene oxide dimer	13252-13-6
PFECBS	Perfluoro-4-ethylcyclohexanesulfonate	67584-42-3
PFBSA	Perfluorobutanesulfonamide	30334-69-1
PFHxSA	Perfluorohexanesulfonamide	41997-13-1

Analytical Laboratory Report

General Report Notes

Analytical results relate only to the samples tested, in the condition received by the laboratory.

Methods may be modified for improved performance.

Results reported on a dry weight basis where applicable.

'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).

When MDL results are provided, then 'Not detected' indicates that parameter was not found at a level equal to or greater than the MDL.

40 CFR Part 136 Table II Required Containers, Preservation Techniques and Holding Times for the Clean Water Act specify that samples for acrolein and acrylonitrile, and 2-chloroethylvinyl ether need to be preserved at a pH in the range of 4 to 5 or if not preserved, analyzed within 3 days of sampling.

QA/QC corresponding to this analytical report is a separate document with the same Merit ID reference and is available upon request.

Full accreditation certificates are available upon request. Starred (*) analytes are not NELAP accredited.

Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.

Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc.

Limits for drinking water samples, are listed as the MCL Limits (Maximum Contaminant Level Concentrations)

PFAS requirement: Section 9.3.8 of U.S. EPA Method 537.1 states "If the method analyte(s) found in the Field Sample is present in the

FRB at a concentration greater than 1/3 the MRL, then all samples collected with that FRB are invalid and must be recollected and reanalyzed."

Samples submitted without an accompanying FRB may not be acceptable for compliance purposes.

Wisconsin PFAs analysis: MDL = LOD; RL = LOQ. LOD and LOQ are adjusted for dilution.

Report Narrative

There is no additional narrative for this analytical report

Analytical Laboratory Report

Laboratory Certifications

Authority	Certification ID
Michigan DEQ	#9956
DOD ELAP/ISO 17025	#69699

Wisconsin DNR	FID# 399147320

Qualifier Descriptions

Qualifier	Description
!	Result is outside of stated limit criteria
B	Compound also found in associated method blank
E	Concentration exceeds calibration range
F	Analysis run outside of holding time
G	Estimated result due to extraction run outside of holding time
H	Sample submitted and run outside of holding time
I	Matrix interference with internal standard
J	Estimated value less than reporting limit, but greater than MDL
L	Elevated reporting limit due to low sample amount
M	Result reported to MDL not RDL
O	Analysis performed by outside laboratory. See attached report.
R	Preliminary result
S	Surrogate recovery outside of control limits
T	No correction for total solids
X	Elevated reporting limit due to matrix interference
Y	Elevated reporting limit due to high target concentration
b	Value detected less than reporting limit, but greater than MDL
e	Reported value estimated due to interference
j	Analyte also found in associated method blank
p	Benzo(b)Fluoranthene and Benzo(k)Fluoranthene integrated as one peak.
x	Preserved from bulk sample
